License Agreement

Permission is hereby granted by the Open Geospatial Consortium, ("Licensor"), free of charge and subject to the terms set forth below, to any person obtaining a copy of this Intellectual Property and any associated documentation, to deal in the Intellectual Property without restriction (except as set forth below), including without limitation the rights to implement, use, copy, modify, merge, publish, distribute, and/or sublicense copies of the Intellectual Property, and to permit persons to whom the Intellectual Property is furnished to do so, provided that all copyright notices on the intellectual property are retained intact and that each person to whom the Intellectual Property is furnished agrees to the terms of this Agreement.

If you modify the Intellectual Property, all copies of the modified Intellectual Property must include, in addition to the above copyright notice, a notice that the Intellectual Property includes modifications that have not been approved or adopted by LICENSOR.

THIS LICENSE IS A COPYRIGHT LICENSE ONLY, AND DOES NOT CONVEY ANY RIGHTS UNDER ANY PATENTS THAT MAY BE IN FORCE ANYWHERE IN THE WORLD.

THE INTELLECTUAL PROPERTY IS PROVIDED "AS IS", WITHOUT WARRANTY OF ANY KIND, EXPRESS OR IMPLIED, INCLUDING BUT NOT LIMITED TO THE WARRANTIES OF MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE, AND NONINFRINGEMENT OF THIRD PARTY RIGHTS. THE COPYRIGHT HOLDER OR HOLDERS INCLUDED IN THIS NOTICE DO NOT WARRANT THAT THE FUNCTIONS CONTAINED IN THE INTELLECTUAL PROPERTY WILL MEET YOUR REQUIREMENTS OR THAT THE OPERATION OF THE INTELLECTUAL PROPERTY WILL BE UNINTERRUPTED OR ERROR FREE. ANY USE OF THE INTELLECTUAL PROPERTY SHALL BE MADE ENTIRELY AT THE USER'S OWN RISK. IN NO EVENT SHALL THE COPYRIGHT HOLDER OR ANY CONTRIBUTOR OF INTELLECTUAL PROPERTY RIGHTS TO THE INTELLECTUAL PROPERTY BE LIABLE FOR ANY CLAIM, OR ANY DIRECT, SPECIAL, INDIRECT OR CONSEQUENTIAL DAMAGES, OR ANY DAMAGES WHATSOEVER RESULTING FROM ANY ALLEGED INFRINGEMENT OR ANY LOSS OF USE, DATA OR PROFITS, WHETHER IN AN ACTION OF CONTRACT, NEGLIGENCE OR UNDER ANY OTHER LEGAL THEORY, ARISING OUT OF OR IN CONNECTION WITH THE IMPLEMENTATION, USE, COMMERCIALIZATION OR PERFORMANCE OF THIS INTELLECTUAL PROPERTY.

This license is effective until terminated. You may terminate it at any time by destroying the Intellectual Property together with all copies in any form. The license will also terminate if you fail to comply with any term or condition of this Agreement. Except as provided in the following sentence, no such termination of this license shall require the termination of any third party end-user sublicense to the Intellectual Property which is in force as of the date of notice of such termination. In addition, should the Intellectual Property, or the operation of the Intellectual Property, infringe, or in LICENSOR's sole opinion be likely to infringe, any patent, copyright, trademark or other right of a third party, you agree that LICENSOR, in its sole discretion, may terminate this license without any compensation or liability to you, your licensees or any other party. You agree upon termination of any kind to destroy or cause to be destroyed the Intellectual Property together with all copies in any form, whether held by you or by any third party.

Except as contained in this notice, the name of LICENSOR or of any other holder of a copyright in all or part of the Intellectual Property shall not be used in advertising or otherwise to promote the sale, use or other dealings in this Intellectual Property without prior written authorization of LICENSOR or such copyright holder. LICENSOR is and shall at all times be the sole entity that may authorize

you or any third party to use certification marks, trademarks or other special designations to indicate compliance with any LICENSOR standards or specifications. This Agreement is governed by the laws of the Commonwealth of Massachusetts. The application to this Agreement of the United Nations Convention on Contracts for the International Sale of Goods is hereby expressly excluded. In the event any provision of this Agreement shall be deemed unenforceable, void or invalid, such provision shall be modified so as to make it valid and enforceable, and as so modified the entire Agreement shall remain in full force and effect. No decision, action or inaction by LICENSOR shall be construed to be a waiver of any rights or remedies available to it.

i. Abstract

The OGC *Web Coverage Service (WCS) Application Profile - Earth Observation* (EO- WCS), defines a profile of WCS 2.0 [OGC 09-110r4] for use on Earth Observation data.

Suggested additions, changes, and comments on this draft document are welcome and encouraged. Such suggestions may be submitted by email message or by making suggested changes in an edited copy of this document.

ii. Keywords

The following are keywords to be used by search engines and document catalogues.

ogcdoc, OGC document, wcs, profile, eo, earth observation, dataset, dataset series, stitched mosaic

iii. Preface

This WCS Application Profile for Earth Observation is an OGC Interface Standard which relies on WCS 2.0 (the Core [OGC 09-110r4] plus selected extensions), the Coverages Implementation Schema (renamed from GML Application Schema - Coverages) [OGC 09-146r2], the Earth Observation Metadata Profile of Observations and Measurements [OGC 10-157r4], and GML 3.2.1 [OGC 07-036].

This document includes four annexes; only the first annex is normative.

The OGC® Abstract Specification does not require any changes to accommodate the technical contents of this (part of this) document.

Among the topics for future development are the following items:

- Specify usage and content of **EOWCS::Lineage** in more detail.

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. The Open Geospatial Consortium shall not be held responsible for identifying any or all such patent rights.

Recipients of this document are requested to submit, with their comments, notification of any relevant patent claims or other intellectual property rights of which they may be aware that might be infringed by any implementation of the standard set forth in this document, and to provide supporting documentation.

iv. Submitting organizations

The following organizations submitted this Document to the Open Geospatial Consortium (OGC):

Organization name(s)

- Jacobs University Bremen
- EOX IT Services GmbH
- G.I.M. Geographic Information Management nv/sa
- European Space Agency (ESA)

- Spot Image

Additionally, rasdaman GmbH has made substantial contributions.

v. Submitters

All questions regarding this submission should be directed to the editor or the submitters:

Name	Affiliation
Peter Baumann	Jacobs University Bremen, rasdaman GmbH
Jinsongdi Yu	Fuzhou University
Stephan Meissl < stephan.meissl@eox.at >	EOX IT Services GmbH
Christian Schiller	EOX IT Services GmbH

Chapter 1. Scope

This OGC WCS Application Profile - Earth Observation Interface Standard - henceforth abbreviated as: *WCS Earth Observation Application Profile (EO- WCS)* - defines data structures and operations which together allow retrieval of Earth Observation coverages offered by a WCS 2.0 server.

EO- WCS, defines a profile of WCS 2.0 [OGC 09-110r4] for use on Earth Observation data. An Application Profile bundles several specifications and possibly adds additional requirements on an implementation. Extra requirements can be additions (for example, Dataset Series are introduced by this specification) or constraints (for example, coverages offered are required to include EO metadata).

EO-WCS provides the following specification elements:

- Definition of specific Earth Observation coverages (EO Coverages) which have a latitude/longitude or projected x/y spatial extent and a temporal validity extent. EO Coverages are derived from Referenceable Grid Coverages and Rectified Grid Coverages as defined in the Coverage Implementation Schema (renamed from GML Application Schema - Coverages) [OGC 09-146r2]. Each EO Coverage has an EO metadata set [OGC 10-157r4] contained in its metadata which describes the coverage on hand on a higher semantic level.
- Definition of a hierarchy which allows to group EO Coverages suitably for an efficient retrieval:
 - Datasets as plain EO Coverages (and, hence, accessible as coverages);
 - Stitched Mosaics as homogeneous collections of spatially non-overlapping subsets of Datasets, accessible themselves as coverages;
 - Dataset Series as collections of Stitched Mosaics, Datasets, and/or Dataset Series; Dataset Series themselves are not coverages.
- Bundling of several mandatory and optional WCS extensions for EO-WCS implementations.

Chapter 2. Conformance

This document establishes the following requirements and conformance classes:

- *eowcs*, of URI http://www.opengis.net/spec/WCS_application-profile_earth-observation/1.1/req/eowcs, defining EO-WCS on conceptual level in Clauses 6, 7, and 8; the corresponding conformance class is *eowcs*, with URI http://www.opengis.net/spec/WCS_application-profile_earth-observation/1.1/conf/eowcs.
- *eowcs_geteocoverageset*, of URI http://www.opengis.net/spec/WCS_application-profile_earth-observation/1.1/req/eowcs_geteocoverageset, defining the GetEOCoverageSet request of EO-WCS in Clause 7 where stated, particularly subclause 7.6; the corresponding conformance class is *eowcs_geteocoverageset*, with URI http://www.opengis.net/spec/WCS_application-profile_earth-observation/1.1/conf/eowcs_geteocoverageset.
- *eowcs_get-kvp*, of URI http://www.opengis.net/spec/WCS_application-profile_earth-observation/1.1/req/eowcs_get-kvp, defining the GET-KVP protocol binding of EO-WCS in Subclause 9.2; the corresponding conformance class is *eowcs_get-kvp*, with URI http://www.opengis.net/spec/WCS_application-profile_earth-observation/1.1/conf/eowcs_get-kvp.
- *eowcs_soap*, of URI http://www.opengis.net/spec/WCS_application-profile_earth-observation/1.1/req/eowcs_soap, defining the SOAP protocol binding of EO-WCS on conceptual level in Subclause 9.3; the corresponding conformance class is *eowcs_soap*, with URI http://www.opengis.net/spec/WCS_application-profile_earth-observation/1.1/conf/eowcs_soap.

Standardization target of all requirements and conformance classes are EO-WCS implementations (currently: servers).

Requirements and conformance test URIs defined in this document are relative to http://www.opengis.net/spec/WCS_application-profile_earth-observation/1.1/.

Conformance Class Abstract Test Suite (Normative) lists the conformance tests which shall be exercised on any software artifact claiming to implement EO-WCS.

Chapter 3. Normative references

This *OGC WCS Application Profile - Earth Observation* specification consists of the present document and an [XML Schema](http://www.opengis.net/spec/WCS_application-profile_earth-observation/1.1). The complete specification is identified by OGC URI http://www.opengis.net/spec/WCS_application-profile_earth-observation/1.1, the document has OGC URI http://www.opengis.net/doc/IS/WCS_application-profile_earth-observation/1.1.

The complete specification is available for download from <http://www.opengeospatial.org/standards/wcs>; additionally, the XML Schema is posted online at <http://schemas.opengis.net/wcs/wcseo/1.1> as part of the OGC schema repository. In the event of a discrepancy between bundled and schema repository versions of the XML Schema files, the schema repository shall be considered authoritative.

The following normative documents contain provisions that, through reference in this text, constitute provisions of this specification. For dated references, subsequent amendments to, or revisions of, any of these publications do not apply. For undated references, the latest edition of the normative document referred to applies.

OGC 06-121r9, *OGC Web Services Common Standard*, version 2.0

OGC 09-146r2, *OGC® Coverage Implementation Schema* (renamed from *OGC® GML Application Schema - Coverages*), version 1.0

Conformance classes used: *gml-coverage*, *gml*, *multipart*, *special-format*

OGC 09-110r4, *OGC® WCS 2.0 Interface Standard- Core: Corrigendum*, version 2.0

Conformance classes used: *core*

OGC 11-053r1, *OGC® Web Coverage Service Interface Standard - CRS Extension*, version 1.0

Conformance classes used: *crs*, *crs-gridded-coverage*

OGC 12-039, *OGC® Web Coverage Service Interface Standard - Scaling Extension*, version 1.0

Conformance classes used: *scaling*

OGC 12-040, *OGC® Web Coverage Service Interface Standard - Range Subsetting Extension*, version 1.0

Conformance classes used: *record-subsetting*

OGC 12-049, *OGC® Web Coverage Service Interface Standard - Interpolation Extension*, version 1.0

Conformance classes used: *interpolation*

OGC 09-147r3, *OGC® Web Coverage Service 2.0 Interface Standard - KVP Protocol Binding Extension - Corrigendum*, version 1.0

Conformance classes used: *get-kvp*

OGC 09-149r1, *OGC® Web Coverage Service 2.0 Interface Standard - XML/SOAP Protocol Binding Extension*, version 1.0

Conformance classes used: *soap*

OGC 12-100r1, *OGC® GML Application Schema - Coverages - GeoTIFF Coverage Encoding Profile*, version 1.0

Conformance classes used: *geotiff-coverage*

OGC 14-100r2, OGC® *CF-netCDF 3.0 encoding using GML Coverage Application Schema*, version 2.0

Conformance classes used: *CF-netCDF-1.6 GML encoding*, *CF-netCDF-1.6 data format*, *CF-netCDF-1.6 multipart data encoding*

OGC 12-108, OGC® *GML Application Schema - Coverages JPEG2000 Coverage Encoding Extension*, version 1.0

Conformance classes used: *jpeg2000-coverage*

OGC 10-157r4, OGC® *Earth Observation Metadata profile of Observations & Measurements*, version 1.1

Conformance classes used: *eop*, *sar*, *opt*

Chapter 4. Terms and Definitions

This document uses the standard terms defined in Subclause 5.3 of [OGC 06-121r9], which is based on the ISO/IEC Directives, Part 2, Rules for the structure and drafting of International Standards. In particular, the word "shall" (not "must") is the verb form used to indicate a requirement to be strictly followed to conform to this standard.

For the purposes of this document, the following additional terms and definitions apply. An arrow "→" indicates that the following term is defined in this Clause.

4.1. Coverage

digital representation of a spatio-temporally varying phenomenon as defined in [OGC 09-146r2]

4.2. Dataset

→ [EO Coverage](#)

NOTE	A Dataset usually represents observations obtained by satellite instruments.
-------------	--

4.3. Dataset Series

collection of → [EO Coverages](#)

4.4. EO Coverage

Rectified Grid → [Coverage](#) or Referenceable Grid → [Coverage](#) having an → [EO Metadata](#) record and a WGS84 footprint

4.5. EO Metadata

→ [EO Coverage's](#) metadata record

4.6. Stitched Mosaic

→ [EO Coverage](#) composed from subsets of one or more co-referenced → [Datasets](#)

4.7. EO Product

An EO Product contains one or more related → [EO Product](#) Datasets plus metadata and optionally auxiliary data like → [EO Product](#) Quicklooks.

4.8. EO Product Dataset

One or more files each containing one or more → [EO Coverages](#).

4.9. EO Product Quicklook

A visual representation of a usually reduced → [EO Product](#) Dataset encoded in an image format. The → [EO Product](#) Dataset may combine different bands.

4.10. Lineage record

Data structure documenting an operation that has been applied to the → [Coverage](#) it is part of

4.11. refers to

contains, in its → [EO Metadata](#) element as defined in [OGC 10-157r4], the → [EO Metadata](#) element of

Chapter 5. Conventions

5.1. UML notation

Unified Modeling Language (UML) static structure diagrams appearing in this specification are used as described in Subclause 5.2 of OGC Web Services Common [OGC 06-121r9].

5.2. Data dictionary tables

The UML model data dictionary is specified herein in a series of tables. The contents of the columns in these tables are described in Subclause 5.5 of [OGC 06-121r9]. The contents of these data dictionary tables are normative, including any table footnotes.

5.3. Namespace prefix conventions

The following namespaces are used in this document. The prefix abbreviations used constitute conventions used here, but are **not** normative. The namespaces to which the prefixes refer are normative, however.

Table 1. Namespace mappings

Prefix	Namespace URI	Description
xsd	http://www.w3.org/2001/XMLSchema	XML Schema namespace
ows	http://www.opengis.net/ows/2.0	OWS Common 2.0
gml	http://www.opengis.net/gml/3.2	GML 3.2.1
gmlcov	http://www.opengis.net/gmlcov/1.0	Coverages Implementation Schema 1.0
wcs	http://www.opengis.net/wcs/2.0	WCS 2.0
eop	http://www.opengis.net/eop/2.1	Earth Observation Metadata Profile of Observations and Measurements
opt	http://www.opengis.net/opt/2.1	Optical Earth Observation Metadata Profile of Observations and Measurements (extension of eop)
sar	http://www.opengis.net/sar/2.1	SAR Earth Observation Metadata Profile of Observations and Measurements (extension of eop)
wcseo	http://www.opengis.net/wcs/wcseo/1.1	WCS Application Profile - Earth Observation 1.1
scal	http://www.opengis.net/wcs/scaling/1.0 (schema uses http://www.opengis.net/WCS_service-extension_scaling/1.0)	WCS Scaling Extension
int	http://www.opengis.net/wcs/interpolation/1.0 (schema uses http://www.opengis.net/WCS_service-extension_interpolation/1.0)	WCS Interpolation Extension
crs	http://www.opengis.net/wcs/crs/1.0	WCS CRS Extension

Prefix	Namespace URI	Description
gmd	http://www.isotc211.org/2005/gmd	ISO 19139 Metadata
gmi	http://standards.iso.org/iso/19115/-2/gmi/1.0 or http://www.isotc211.org/2005/gmi	ISO 19139-2 Metadata
mdb	http://standards.iso.org/iso/19115/-3/mdb/1.0	ISO 19115-3 Metadata

5.4. Multiple representations

When multiple representations of the same information are given in a specification document these are consistent. Should this not be the case then this is considered an error, and the [XML Schema](#) shall take precedence.

Chapter 6. EO data model

6.1. Overview

This Clause 6, together with Clauses 7 and 8, establishes the EO-WCS core requirements class, *ewwcs* as well as the *ewwcs_geteocoverageset* one where stated, particularly subclause 7.6.

The data model of this EO-WCS centers around the data structure of an Earth Observation coverage (EO Coverage), which is a coverage extended with EO Metadata [OGC 10-157r4] and bound to a location on the Earth. EO Coverages are a subtype of either `GMLCOV::RectifiedGridCoverage` or `GMLCOV::ReferenceableGridCoverage`.

Based on this EO Coverage concept (cf. Subclause 6.3), three main data elements are defined:

- A *Dataset* is an EO Coverage, which can represent, for example, a hyperspectral 2D satellite scene or a 3D atmospheric model; cf. Subclause 6.4. A Dataset can be a Rectified Dataset or a Referenceable Dataset, depending on the type of EO Coverage it is derived from.
- A *Stitched Mosaic* is a collection of EO Coverages referring to co-referenced Datasets; cf. Subclause 6.5. A Stitched Mosaic can be a Rectified Stitched Mosaic or a Referenceable Stitched Mosaic, depending on the type of EO Coverage it is derived from. A Stitched Mosaic can be interpreted (i.e. requested) as a single coverage.
- A *Dataset Series* is a collection of coverages and/or Dataset Series; cf. Subclause 6.6. A Dataset Series can refer to any number of Datasets, Stitched Mosaics, and Dataset Series. A Dataset Series is not a coverage itself.

NOTE

[Use Case Examples \(Informative\)](#) provides Use Cases to motivate the definition of these data elements.

NOTE

Although named *Dataset Series* technically speaking it is a heterogeneous grouping of coverages and/or Dataset Series and can thus be used for any other concept like an EO Product containing multiple coverages with different resolutions as well.

[Figure 1](#) informally symbolizes how the concepts of Dataset, Stitched Mosaic, and Dataset Series relate to each other spatio-temporally:

- A - a Dataset with a particular validity in time;
- B - a Stitched Mosaic; all its Datasets have a spatial extent contained in the Stitched Mosaic's spatial extent and a timespan contained in the Stitched Mosaic's time interval. The subsets contributing to the Stitched Mosaic do not overlap in space, but there may be empty (nil) areas.
- C - the overall Dataset Series combining Datasets and Stitched Mosaics.

Figure 1. Conceptual view of a Dataset Series with Stitched Mosaic and Dataset

Figure 2 contains the UML diagram defining classes (types) and their correlations in the EO-WCS.

6.2. EO Metadata

Every EO Coverage contains *EO Metadata*, consisting of an EarthObservation record as defined in the OGC Earth Observation Metadata Profile of Observations and Measurements [OGC 10-157r4] and a lineage describing the history of operations leading to the coverage on hand.

Requirement 1	/req/eowcs/eo-metadata-structure A EOWCS::EOMetadata instance shall conform to Table 2 , Figure 2 , Figure 3 , and the XML Schema being part of this standard.
----------------------	---

Table 2. Components of **EOWCS::EOMetadata** structure

Name	Definition	Data type	Multiplicity
earthObservation	EO metadata record for this coverage object	EOP::EarthObservation	one (mandatory)
lineage	History record describing an operation that has been applied to this object	EOWCS::Lineage	zero or more (optional)

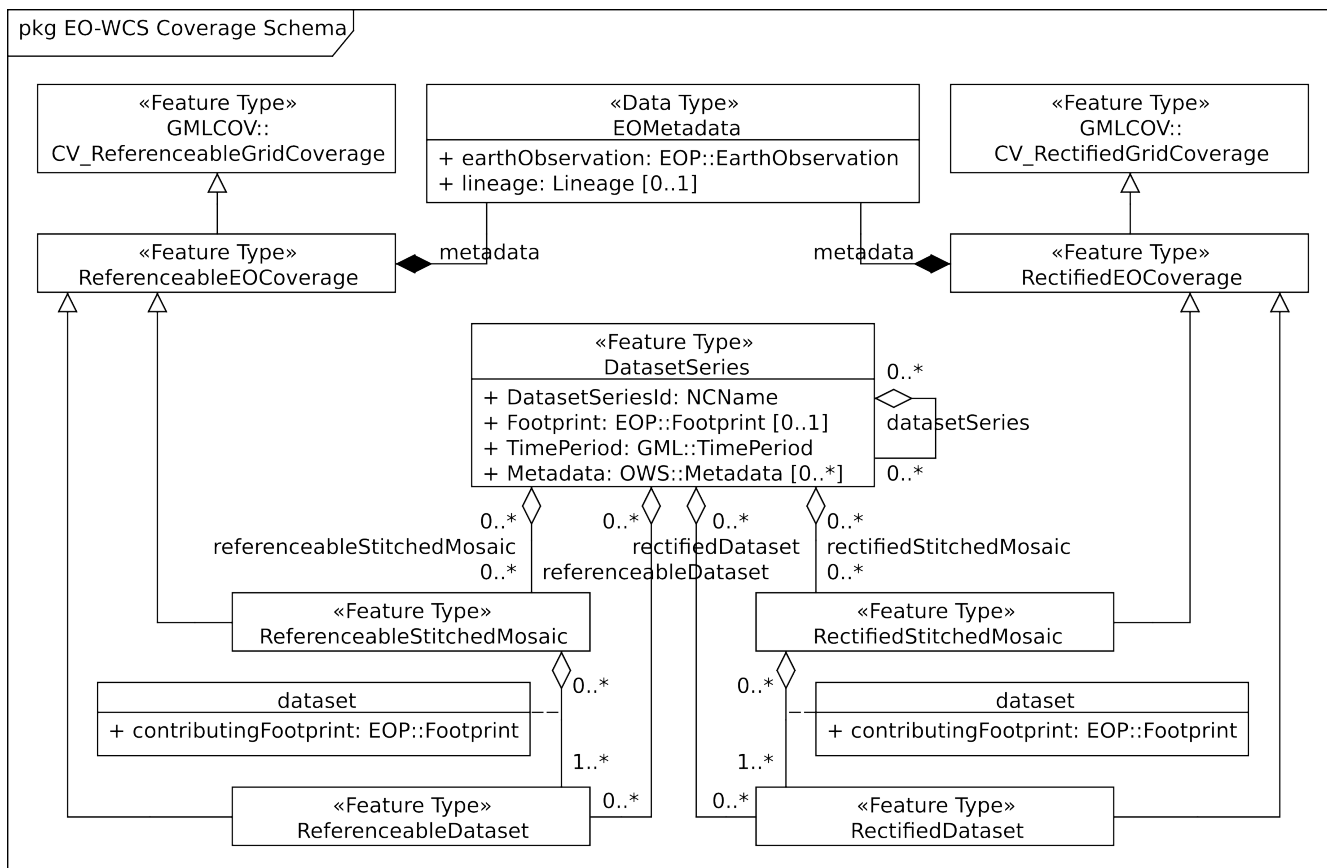

Figure 2. UML Model of WCS EO Application Profile Schema

NOTE

Throughout this standard, **eop:** and **EOP::** can be substituted by **opt:** and **OPT::** or **sar:** and **SAR::**, respectively, as in [OGC 10-157r4] **opt** and **sar** are in the substitution group of **eop**.

Figure 3. UML Lineage class diagram

NOTE

The lineage records are supposed to describe the history of processing steps that has led to the coverage on hand. As at the time of this writing there is no canonical format for such histories available in OGC, for the purpose of this specification no assumption is made about the contents of a lineage record, except that GetCoverage appends its request verbatim as an additional record (see [Requirement 55 /req/eowcs/getCoverage-response-lineage-in-eo-metadata](#)).

The footprint of an EO Coverage, which contains one or more bounding polygons to describe the region of valid data more accurately than the EO Coverage's bounding box, is mandatory as opposed to [OGC 10-157r4].

Requirement 2	/req/eowcs/footprint-in-eo-metadata The EOWCS::EOMetadata element of EOWCS::ReferenceableEOCoverage and EOWCS::RectifiedEOCoverage instances shall contain an eop:EarthObservation/om:featureOfInterest/eop:Footprint element.
----------------------	--

NOTE As per [OGC 10-157r4], the footprint is always given in WGS84.

6.3. EO Coverage

6.3.1. Overview

An *EO Coverage* is a coverage as defined in the Coverages Implementation Schema (renamed from GML Application Schema - Coverages) [OGC 09-146r2]. EO Coverages appear in two variants:

- *Rectified EO Coverages* are derived from Rectified Grid Coverage as defined in [OGC 09-146r2];
- *Referenceable EO Coverages* are derived from Referenceable Grid Coverage as defined in [OGC 09-146r2].

Requirement 3	/req/eowcs/eo-coverage-structure EOWCS::ReferenceableEOCoverage and EOWCS::RectifiedEOCoverage instances shall conform to Figure 2 , Figure 3 , and the XML Schema being part of this standard.
----------------------	---

NOTE An *EO Coverage* can have any number of dimensions as long as it adheres to the requirements below. Particularly it needs a footprint bound to the Earth and a temporal validity.

6.3.2. EO Metadata

An EO Coverage has an EO Metadata record associated.

Requirement 4	/req/eowcs/eo-metadata-in-eo-coverage EOWCS::ReferenceableEOCoverage and EOWCS::RectifiedEOCoverage instances shall contain one metadata element of type EOWCS::EOMetadata .
----------------------	---

NOTE Besides this specific metadata element there may be further metadata elements.

NOTE According to the rules of GML, a `xlink:href` URI to an accessible element of type **EOWCS::EOMetadata** can be provided instead of the element itself in any place of the XML Schema where such a metadata record appears.

The EO Metadata record associated with an EO Coverage contains a back reference to the coverage.

Requirement 5	/req/eowcs/eop-identifier-in-eo-metadata The EOWCS::EOMetadata element of EOWCS::ReferenceableEOCoverage and EOWCS::RectifiedEOCoverage instances shall contain an element eop:EarthObservation/eop:metadataProperty/eop:EarthObservationMetadata/eop:identifier whose first word (NCNAME type substring i.e. starting from it's first character up to and excluding the first character which is not allowed in an NCName) is identical to the EO Coverage identifier.
----------------------	--

NOTE

Normally, this word (i.e. NCName) acting as coverage identifier will be the only contents of the **eop:identifier** string and thus both elements will be equal.

6.3.3. Spatio-temporal extent

The EO Coverage's extent of valid data is given by its EO Metadata footprint, which refines the coverage's envelope.

Requirement 6	/req/eowcs/footprint-inside-boundedBy In EOWCS::ReferenceableEOCoverage and EOWCS::RectifiedEOCoverage instances, all polygons listed in eop:EarthObservation/om:featureOfInterest/eop:Footprint element shall be geometrically contained in the bounding box of the gml:boundedBy element of the gml:Envelope .
----------------------	---

NOTE

By definition, the footprint is expressed in WGS84.

An EO Coverage has a time period of validity associated.

Requirement 7	/req/eowcs/phenomenonTime-in-eo-metadata The EOWCS::EOMetadata element of a EOWCS::ReferenceableEOCoverage or EOWCS::RectifiedEOCoverage instance shall contain elements eop:EarthObservation/om:phenomenonTime/gml:TimePeriod/gml:beginPosition and eop:EarthObservation/om:phenomenonTime/gml:TimePeriod/gml:endPosition where $beginPosition \leq endPosition$.
----------------------	--

NOTE

This typically is the time period where image acquisition has taken place.

Requirement 8	/req/eowcs/phenomenonTime-iso8601 For any given EO Coverage, its temporal validity values shall be expressed in ISO 8601 [2].
----------------------	---

6.3.4. Range type

The range type of an EO Coverage is extended to include further useful information for example to know how to convert stored numbers to physical properties.

Requirement 9	<p>/req/eowcs/rangeTypeExtension</p> <p>If additional range type information is made available then the <code>gmlcov:rangeType</code> element of <code>EOWCS::ReferenceableEOCoverage</code> and <code>EOWCS::RectifiedEOCoverage</code> instances shall contain <code>wcseo:rangeTypeExtension</code> elements either under the <code>swe:DataRecord/swe:extension</code> or each <code>swe:DataRecord/swe:field/swe:Quantity/swe:extension</code> element or both.</p>
----------------------	---

Requirement 10	<p>/req/eowcs/rangeType-uom</p> <p>In <code>EOWCS::ReferenceableEOCoverage</code> and <code>EOWCS::RectifiedEOCoverage</code> instances, the <code>code</code> attribute of the <code>swe:uom</code> element of each <code>swe:Quantity</code> element in the <code>gmlcov:rangeType</code> element shall hold the unit of the measured physical property.</p>
-----------------------	---

NOTE

The data type is provided explicitly in the `wcseo:rangeTypeExtension` element or implicitly via the actual coverage encoding.

Requirement 11	<p>/req/eowcs/rangeType-name</p> <p>In <code>EOWCS::ReferenceableEOCoverage</code> and <code>EOWCS::RectifiedEOCoverage</code> instances, the <code>swe:identifier</code> element of each <code>swe:Quantity</code> element under each <code>swe:field</code> element shall hold the URL-encoded identifier of the respective field (also referred to as band or channel) and the <code>name</code> attribute of each <code>swe:field</code> element shall hold the first word (NCNAME type substring i.e. starting from it's first character up to and excluding the first character which is not allowed in an NCName) of the identifier of the respective field.</p>
-----------------------	---

NOTE

Typically the two values are identical. This requirement addresses cases where the identifier includes characters not allowed in NCName like `:`, `@`, `$`, `%`, `&`, `/`, `+`, `,`, `;`, or any whitespace characters or where it starts with a number, minus, or dot. For example an ID of `gray band` should use `gray` for the `name` attribute and `gray%20band` for the `swe:identifier` element.

Example: The following provides an example `gmlcov:rangeType` element including additional range type information for RGB generation on `swe:DataRecord` level as well as data conversion information on `swe:Quantity` level.

```
<gmlcov:rangeType>
```

</swe:field>
</swe:DataRecord>

```

6.3.5. Range set

Cells outside the footprint hold only nil values.

Requirement 12	/req/eowcs/range-set-of-eo-coverage In EOWCS::ReferenceableEOCoverage and EOWCS::RectifiedEOCoverage instances, all cells whose locations are outside the EO Metadata footprint when both are evaluated in WGS84, shall contain nil values as defined in the bounding EO Coverage's range type.
-----------------------	---

6.4. Dataset

A *Dataset* is an EO Coverage as symbolized in [Figure 4](#). A Dataset is either a Referenceable Dataset or a Rectified Dataset, derived from **EOWCS::ReferenceableEOCoverage** or **EOWCS::RectifiedEOCoverage**, respectively.

NOTE Typically, a Dataset represents a (single- or multi-band) satellite/aerial image scene.

Requirement 13	/req/eowcs/dataset-structure A EOWCS::ReferenceableDataset and a EOWCS::RectifiedDataset shall conform to Figure 2 , Figure 3 , and the XML Schema being part of this standard.
-----------------------	---

Figure 4. Conceptual view of a Dataset: in referenced (left) and unreferenced coordinates (right)

NOTE This definition includes the "field-of-View" of a sensor, or "cut", according to sensor specific data specification at the resolution of the sensor (also referred to as Level-0 or Level-1 data).

6.5. Stitched Mosaic

6.5.1. Overview

A *Stitched Mosaic* is an identifiable, queryable, referenced EO Coverage as symbolized in [Figure 5](#). A

Stitched Mosaic is either a Referenceable Stitched Mosaic or a Rectified Stitched Mosaic, derived from `EOWCS::ReferenceableEOCoverage` or `EOWCS::RectifiedEOCoverage`, respectively.

Stitched Mosaics *refer* to one or more Datasets. All cells within a Stitched Mosaic which are not located inside any `contributingFootprint` of any of the contained Datasets carry nil values.

Figure 5. Conceptual view of a Stitched Mosaic: composed from Datasets (Stitched Mosaic bounding box dashed)

Requirement 14	<code>/req/eowcs/referenceableStitchedMosaic-structure</code> <code>EOWCS::ReferenceableStitchedMosaic</code> instances shall conform to Figure 2 , Figure 3 , Table 3 , Table 5 , and the XML Schema being part of this standard.
-----------------------	--

Table 3. Components of `EOWCS::ReferenceableStitchedMosaic` structure

Name	Definition	Data type	Multiplicity
dataset	Reference to a Referenceable Dataset referred to by the Stitched Mosaic on hand	<code>EOWCS::DatasetReference</code>	one or more (mandatory)

Requirement 15	<code>/req/eowcs/rectifiedStitchedMosaic-structure</code> <code>EOWCS::RectifiedStitchedMosaic</code> instances shall conform to Figure 2 , Figure 3 , Table 4 , Table 5 , and the XML Schema being part of this standard.
-----------------------	--

Table 4. Components of `EOWCS::RectifiedStitchedMosaic` structure

Name	Definition	Data type	Multiplicity
dataset	Reference to a Rectified Dataset referred to by the Stitched Mosaic on hand	<code>EOWCS::DatasetReference</code>	one or more (mandatory)

Table 5. Components of `EOWCS::DatasetReference` structure

Name	Definition	Data type	Multiplicity
datasetId	Dataset referred to by the Stitched Mosaic on hand	WCS::CoverageId	one (mandatory)
contributingFootprint	Horizontal bounding polygon enclosing data areas of the Dataset contributing to the Stitched Mosaic on hand	EOP::Footprint	zero or one (optional)

The Dataset references of an EO Coverage shall be consistent with the coverage's EO Metadata references.

Requirement 16	/req/eowcs/composedOf-in-stitched-mosaic In EOWCS::ReferenceableStitchedMosaic and EOWCS::RectifiedStitchedMosaic instances with at least one eop:EarthObservation/eop:metaDataProperty/eop:EarthObservationMetaData/eop:composedOf, the set of these elements shall be equal to the set of dataset identifiers of the Stitched Mosaic.
-----------------------	---

6.5.2. Spatio-temporal extent

A Stitched Mosaic is defined through a collection of spatially non-overlapping subsets of Datasets it refers to.

Requirement 17	/req/eowcs/contributingFootprint-inside-footprint For all Stitched Mosaics <i>sm</i> referring to some Datasets <i>d</i> with an associated contributingFootprint, this contributingFootprint shall be geographically contained in the footprint of <i>d</i> .
-----------------------	--

Requirement 18	/req/eowcs/contributingFootprint-pairwise-disjoint For all Stitched Mosaics <i>sm</i> referring to Datasets <i>d</i> ₁ and <i>d</i> ₂ , with an associated contributingFootprint, the contributingFootprints of the <i>d</i> ₁ and <i>d</i> ₂ references shall be pair-wise disjoint.
-----------------------	---

Requirement 19	/req/eowcs/contributingFootprint-union-of-footprints The footprint of a Stitched Mosaic shall be given by the union of the contributingFootprints of the Datasets this Stitched Mosaic refers to.
-----------------------	---

Requirement 20	/req/eowcs/dataset-domain-set-in-stitched-mosaic-domain-set For all Datasets <i>d</i> referred to by some Stitched Mosaics <i>sm</i> , all cells of <i>d</i> as defined by the domain set of <i>d</i> shall be contained in the set of cells of <i>sm</i> as defined by the domain set of <i>sm</i> .
-----------------------	---

Datasets referred to by a Stitched Mosaic shall have aligned cell locations:

- In case of Rectified EO Coverages, the grids of Datasets of a Stitched Mosaics shall have the same resolution.

Requirement 21	<p>/req/eowcs/datasets-in-rectifiedStitcheMosaic-same-offsetVector</p> <p>All Datasets referred to by a Rectified Stitched Mosaic shall have identical values in the <code>gml:offsetVector</code> elements of their domain sets.</p>
-----------------------	--

Requirement 22	<p>/req/eowcs/rectifiedStitchedMosaic-offsetVector</p> <p>In a Rectified Stitched Mosaic instance, the value of the <code>gml:offsetVector</code> elements of the domain set shall be given by the corresponding values of the Rectified Datasets the Rectified Stitched Mosaic refers to.</p>
-----------------------	---

- In case of Referenceable EO Coverages, Datasets of Stitched Mosaics shall have aligned cell locations in overlapping areas.

Requirement 23	<p>/req/eowcs/referenceableStitchedMosaic-domain-set</p> <p>For any pair d_1 and d_2 of Datasets referred to by a given Stitched Mosaic, the set of point locations in the geographic overlap of the d_1 and d_2 domain set shall be identical.</p>
-----------------------	--

The temporal validity of Stitched Mosaics is defined by the temporal validities of the Datasets the Stitched Mosaic refers to.

Requirement 24	<p>/req/eowcs/temporal-validity-stitched-mosaic</p> <p>For any given Stitched Mosaic, its temporal validity given by its <code>eop:EarthObservation/om:phenomenonTime/gml:TimePeriod/gml:beginPosition</code> and <code>eop:EarthObservation/om:phenomenonTime/gml:TimePeriod/gml:endPosition</code> elements in <code>wcseo:EOMetadata</code> shall be defined as the minimal time interval containing the temporal validities of all Datasets the Stitched Mosaic refers to.</p>
-----------------------	---

6.5.3. Range type

Stitched Mosaics and their Datasets share the same range type.

Requirement 25	<p>/req/eowcs/datasets-in-stitched-mosaic-same-range-type</p> <p>For all Datasets d some Stitched Mosaic sm refers to the following shall hold: The range type of d is identical to the range type of sm.</p>
-----------------------	--

6.5.4. Range set

The content of a Stitched Mosaic is given by the Datasets it refers to; cells of a Stitched Mosaic with domain coordinates outside of any embedded Dataset's contributingFootprint carry nil values (cf. Figure 6).

Requirement 26	<p>/req/eowcs/nil-values-in-stitched-mosaic</p> <p>If the domain set of a Stitched Mosaic contains locations which are not inside any contributingFootprint of any Dataset the Stitched Mosaic refers to then the nil value set of that Stitched Mosaic shall not be empty.</p>
Requirement 27	<p>/req/eowcs/range-values-of-stitched-mosaic</p> <p>For a Stitched Mosaic <i>sm</i> its range values of cells with location <i>p</i>, expressed in any of the CRSs supported by <i>sm</i>, shall be given as follows:</p> <ul style="list-style-type: none">- if <i>p</i> is located within the contributingFootprint of some Dataset <i>d</i> referred to by <i>sm</i> then it is the range value of <i>d</i> at <i>p</i>;- if <i>p</i> is not located within the contributingFootprint of any Dataset <i>d</i> referred to by <i>sm</i> then it is one of the range values contained in the nil value set of <i>sm</i>.

6.6. Dataset Series

A Dataset Series is an identifiable, queryable collection of EO Coverages and Dataset Series.

NOTE

Although named *Dataset Series* technically speaking it is a heterogeneous grouping of coverages and/or Dataset Series and can thus be used for any other concept like an EO Product containing multiple coverages with different resolutions as well.

NOTE

A Dataset referred to by a Stitched Mosaic referred to by a Dataset Series is not per se referred to by that Dataset Series. However, it is allowed that such a Dataset is also referred to by the enclosing Dataset Series.

Figure 6. Conceptual view of a Dataset Series referring to Datasets and Stitched Mosaics (Dataset Series domain boundary dashed)

Requirement 28	/req/eowcs/datasetSeries-structure
	A EOWCS::DatasetSeries shall conform to Figure 2 , Figure 3 , Table 6 , and the XML Schema being part of this standard.

Table 6. Components of **EOWCS::DatasetSeries** structure

Name	Definition	Data type	Multiplicity
datasetSeriesId	Identifier of the Dataset Series on hand	NCName	one (mandatory)
footprint	Horizontal bounding polygon enclosing valid data areas of the Dataset Series	EOP::Footprint	one (mandatory)
timePeriod	Temporal period of validity of all data in the Dataset Series	GML::TimePeriod	one (mandatory)
metadata	EO Metadata of the Dataset Series on hand	ows:Metadata	zero or more (optional)

Name	Definition	Data type	Multiplicity
referenceableStitchedMosaic	Referenceable Stitched Mosaic to which the Dataset Series on hand refers	WCS::CoverageId	zero or more (optional)
rectifiedStitchedMosaic	Rectified Stitched Mosaic to which the Dataset Series on hand refers	WCS::CoverageId	zero or more (optional)
referenceableDataset	Referenceable Dataset to which the Dataset Series on hand refers	WCS::CoverageId	zero or more (optional)
rectifiedDataset	Rectified Dataset to which the Dataset Series on hand refers	WCS::CoverageId	zero or more (optional)
datasetSeries	Dataset Series to which the Dataset Series on hand refers	EOWCS::datasetSeriesId	zero or more (optional)

NOTE A Dataset Series and a Stitched Mosaic contained therein may both refer to the same Dataset.

The spatial extent of a Dataset Series shall enclose the spatial extents of all Stitched Mosaics, Datasets, and Dataset Series the Dataset Series refers to.

Requirement 29	/req/eowcs/footprint-in-datasetSeries The footprint of a Dataset Series instance shall enclose the union of the footprints of all Stitched Mosaics, Datasets, and Dataset Series the Dataset Series refers to, expressed in WGS84.
-----------------------	---

NOTE As opposed to Stitched Mosaics, Dataset Series do not require disjointness of the EO Coverages they refer to.

The temporal validity of a Dataset Series is defined by the union of the temporal validities of all Stitched Mosaics, Datasets, and Dataset Series the Dataset Series refers to.

Requirement 30	/req/eowcs/timePeriod-in-datasetSeries For any given Dataset Series, the timePeriod element shall enclose the temporal validities of all Stitched Mosaics, Datasets, and Dataset Series the Dataset Series refers to, expressed in ISO 8601 [2].
-----------------------	---

A Dataset Series has an EO Metadata record associated.

Requirement 31	/req/eowcs/metadata-in-datasetSeries A Dataset Series instance shall contain one metadata element of type EOWCS::EOMetadata .
-----------------------	--

NOTE

A Dataset Series may contain multiple metadata elements holding the metadata in different formats. Explicitly supported metadata elements are **eop:EarthObservation**, **gmd:MD_Metadata**, **gmi:MI_Metadata**, **mdb:MD_Metadata**, or **ows:Reference** or any element in the substitutionGroup of any of these.

A Dataset Series shall not refer to any Dataset Series that refers to it either directly or via other Dataset Series i.e. there shall be no circular references.

Requirement 32	/req/eowcs/nocircularreference-of-datasetSeries A Dataset Series shall only refer to Dataset Series that do not refer to the Dataset Series at hand either directly or via other Dataset Series.
-----------------------	--

Example: The following XML fragment shows a DatasetSeries instance.

```

<?xml version="1.0" encoding="UTF-8"?>
<wcseo:DatasetSeries xmlns:ows="http://www.opengis.net/ows/2.0"
xmlns:gml="http://www.opengis.net/gml/3.2" xmlns:wcs="http://www.opengis.net/wcs/2.0"
xmlns:wcseo="http://www.opengis.net/wcs/wcseo/1.1"
xmlns:xlink="http://www.w3.org/1999/xlink"

Chapter 7. EO service model

7.1. Overview

This Clause defines request types and their responses for operations on EO Coverages. EO Coverages can be offered by a WCS server alongside with any other type of coverages. Behavior of the service on non-EO Coverages remains unchanged. EO data model

7.2. *GetCapabilities* operation

7.2.1. *GetCapabilities* request

The *GetCapabilities* request is extended over WCS Core [OGC 09-110r4] as follows:

- In the **sections** request parameter, values "DatasetSeriesSummary" and "CoverageSummary" are allowed in addition to those defined in OWS Common [06-121r9].

Requirement 33	<p>/req/eowcs/getCapabilities-request-sections</p> <p>If a <i>GetCapabilities</i> request contains an ows:Sections element then this element shall contain ows:Section elements with the values defined in OWS Common, or "DatasetSeriesSummary", or "CoverageSummary".</p> <p>Dependency: [OGC 06-121r9] clause 7.3.3</p>
-----------------------	--

7.2.2. *GetCapabilities* response

The *GetCapabilities* response is extended over WCS Core [OGC 09-110r4] as follows:

- There is an additional **DatasetSeriesSummary** section reporting identifiers of Dataset Series offered by the service on hand.
- There is an optional constraint **CountDefault** specifying the maximum number of **CoverageDescription** and **DatasetSeriesDescription** elements reported in a **DescribeEOCoverageSet** response.
- For the *eowcs_geteocoverageset* conformance class there is an additional **<wcseo:wcseoMetadata** element inside the **wcs:Extension** element of the **wcs:ServiceMetadata** element to specify default and supported package formats for the *GetEOCoverageSet* operation.

NOTE

An EO-WCS server may choose to not report, in the **CoverageSummary** section of a *GetCapabilities* response, the identifiers of Stitched Mosaic coverages referred to by some Dataset Series and the identifiers of Dataset coverages referred to by some Stitched Mosaic or Dataset Series.

In a *GetCapabilities* response, a server announces availability of this EO-WCS like an extension.

Requirement 34	<p>/req/eowcs/getCapabilities-response-conformance-class-in-profile</p> <p>A WCS service implementing this extension shall include the following URI in a Profile element in the ServiceIdentification in a GetCapabilities response: http://www.opengis.net/spec/WCS_application-profile_earth-observation/1.1/conf/eowcs</p>
Requirement 35	<p>/req/eowcs_geteocoverageset/getCapabilities-response-conformance-class-in-profile</p> <p>A WCS service implementing the <i>eowcs_geteocoverageset</i> conformance class of this extension shall include the following URI in a Profile element in the ServiceIdentification in a GetCapabilities response: http://www.opengis.net/spec/WCS_application-profile_earth-observation/1.1/conf/eowcs_geteocoverageset</p>
Requirement 36	<p>/req/eowcs/getCapabilities-response-structure</p> <p>The response to a successful <i>GetCapabilities</i> request shall consist of a data structure as defined in Figure 7, Table 7, and the XML Schema being part of this standard.</p> <p>Dependency: [OGC 09-110r4] Clause 8 (http://www.opengis.net/doc/IS/wcs-core-2.0.1/clause/8)</p>

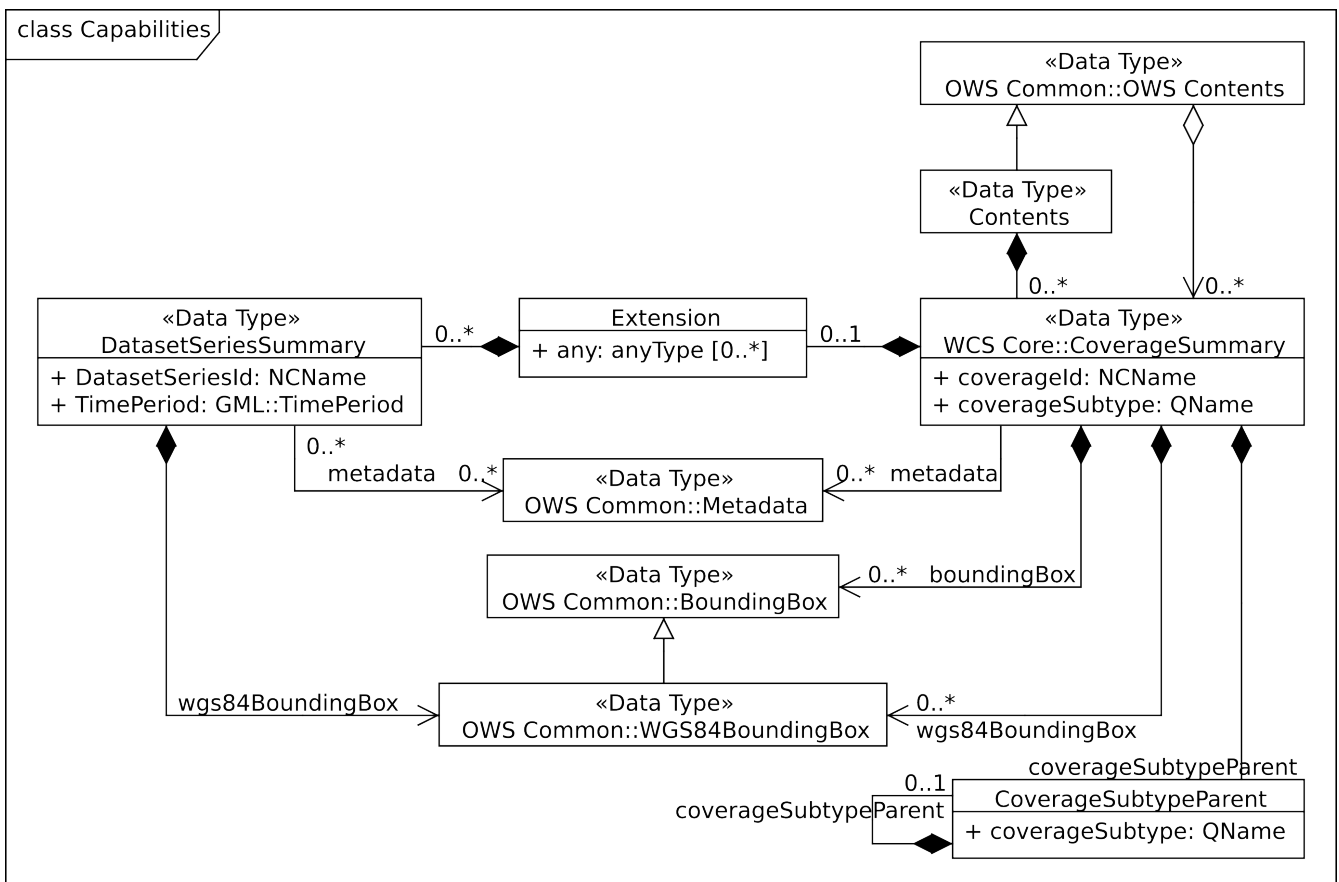

Figure 7. *GetCapabilities* response UML class diagram

Table 7. Components of *EOWCS::DatasetSeriesSummary* structure

Name	Definition	Data type	Multiplicity
DatasetSeriesId	Identifier of a Dataset Series offered by this service	NCName	one (mandatory)
wgs84BoundingBox	Spatial extent of the Dataset Series	OWS Common::WGS84BoundingBox	one (mandatory)
TimePeriod	Time interval of validity of the Dataset Series	GML:TimePeriod	one (mandatory)
metadata	Reference to more metadata about this Dataset Series	OWS Common::Metadata	zero or one (optional)

Requirement 37	/req/eowcs/getCapabilities-response-datasetSeriesSummary In the response to a successful <i>GetCapabilities</i> request containing a EOWCS::DatasetSeriesSummary section, each Dataset Series identifier listed shall refer to a Dataset Series offered by the server.
-----------------------	--

Requirement 38	/req/eowcs/getCapabilities-response-datasetSeriesSummary-no-duplicates A response to a successful <i>GetCapabilities</i> request containing a EOWCS::DatasetSeriesSummary section shall not contain any duplicate Dataset Series identifier.
-----------------------	--

Requirement 39	/req/eowcs/getCapabilities-response-coverageSummary In the response to a successful <i>GetCapabilities</i> request containing an EO Coverage in a WCS::CoverageSummary section, each coverage identifier listed as EO Coverage shall refer to an EO Coverage offered by the server.
-----------------------	---

The response shall respect the **sections** request parameter.

Requirement 40	/req/eowcs/getCapabilities-response-coverageSummary-section If a <i>GetCapabilities</i> request contains a sections parameter then a successful response shall contain wcs:CoverageSummary elements if and only if the section parameter list contains one of the values "CoverageSummary", "Contents", or "All".
-----------------------	---

Requirement 41	/req/eowcs/getCapabilities-response-datasetSeriesSummary-section If a <i>GetCapabilities</i> request contains a sections parameter then a successful response shall contain wcseo:DatasetSeriesSummary elements if and only if the section parameter list contains one of the values "DatasetSeriesSummary", "Contents", or "All".
-----------------------	--

The coverage subtype shall indicate the specific type of the coverage returned, in case of an EO Coverage.

Requirement 42	/req/eowcs/getCapabilities-response-coverageSubtype In the response to a successful <i>GetCapabilities</i> request, each EO Coverage listed shall contain in its WCS::CoverageSubtype element the value given in Table 8 corresponding to its type.
-----------------------	--

Table 8. Values for **CoverageSubtype** elements of EO Coverages

Type of coverage identified by CoverageIdentifier	CoverageSubtype value
EOWCS::RectifiedDataset	RectifiedDataset
EOWCS::ReferenceableDataset	ReferenceableDataset
EOWCS::RectifiedStitchedMosaic	RectifiedStitchedMosaic
EOWCS::ReferenceableStitchedMosaic	ReferenceableStitchedMosaic

Requirement 43	/req/eowcs/getCapabilities-response-countDefault If the response to a successful <i>GetCapabilities</i> request contains an ows:Constraint element in its ows:OperationsMetadata element then its name attribute shall hold a value as defined in Table 9 and the XML Schema being part of this standard.
-----------------------	---

Table 9. Values for **ows:Constraint** elements

Name	Definition	Data type	Multiplicity
CountDefault	Default value for the count parameter defined for <i>DescribeEOCoverageSet</i> and <i>GetEOCoverageSet</i> requests.	Integer greater than or equal to zero	zero or one (optional)
ImplementsResultPaging	Indicates if the server supports the ability to page through a result set responding with count features at a time.	Boolean ; either TRUE or FALSE	zero or one (optional)

NOTE

Servers are strongly encouraged to specify a value for CountDefault as means of self defense, so that a request may not clog the server.

Requirement 44	<p>/req/eowcs/getCapabilities-response-paging-supported</p> <p>The response to a successful <i>GetCapabilities</i> request to an EO-WCS supporting paging shall contain ows:Constraint elements with name attribute values of ImplementsResultPaging and CountDefault. The ImplementsResultPaging constraint shall have a value of "TRUE".</p>
Requirement 45	<p>/req/eowcs_geteocoverageset/getCapabilities-response-wcseoMetadata</p> <p>The response to a successful <i>GetCapabilities</i> request to an EO-WCS supporting the <i>eowcs_geteocoverageset</i> conformance class shall contain a wcseo:wcseoMetadata element in the wcs:Extension element of wcs:ServiceMetadata including at least a wcseo:defaultPackageFormat element.</p>
Requirement 46	<p>/req/eowcs_geteocoverageset/getCapabilities-response-defaultPackageFormat</p> <p>The wcseo:defaultPackageFormat element delivered in the wcseo:wcseoMetadata element of the response to a successful <i>GetCapabilities</i> request shall specify the default format used for <i>GetEOCoverageSet</i> responses.</p>
Requirement 47	<p>/req/eowcs_geteocoverageset/getCapabilities-response-packageFormatSupported</p> <p>The wcseo:packageFormatSupported element(s) delivered in the wcseo:wcseoMetadata element of the response to a successful <i>GetCapabilities</i> request shall list one to one the MIME type identifiers of all supported packaging formats for the <i>GetEOCoverageSet</i> operation.</p>

Example: The following XML excerpt shows a possible **Contents** section containing Dataset Series information:

```

<wcs:Contents>
  <wcs:CoverageSummary>
    <wcs:CoverageId>someEOCoverage</wcs:CoverageId>
    <wcs:CoverageSubtype>RectifiedDataset</wcs:CoverageSubtype>
  </wcs:CoverageSummary>
  <wcs:Extension>
    <wcseo:DatasetSeriesSummary>
      <ows:WGS84BoundingBox>
        <ows:LowerCorner>-180 -90</ows:LowerCorner>
        <ows:UpperCorner>180 90</ows:UpperCorner>
      </ows:WGS84BoundingBox>
      <wcseo:DatasetSeriesId>someDatasetSeries</wcseo:DatasetSeriesId>
      <gml:TimePeriod gml:id="someDatasetSeries_timeperiod">
        <gml:beginPosition>2010-01-01T00:00:00.000</gml:beginPosition>
        <gml:endPosition>2010-12-31T23:59:59.999</gml:endPosition>
      </gml:TimePeriod>
    </wcseo:DatasetSeriesSummary>
  </wcs:Extension>
</wcs:Contents>

```

Example: The following XML excerpt shows a possible **Constraint** section containing a **CountDefault** value:

```

<ows:OperationsMetadata>
  ...
  <ows:Constraint name="CountDefault">
    <ows:NoValues />
    <ows:DefaultValue>100</ows:DefaultValue>
  </ows:Constraint>
  <ows:Constraint name="ImplementsResultPaging">
    <ows:NoValues/>
    <ows:DefaultValue>TRUE</ows:DefaultValue>
  </ows:Constraint>
</ows:OperationsMetadata>

```

Example: The following XML excerpt shows a possible **wcs:ServiceMetadata** section containing valid **wcseo:packageFormatSupported** elements:

```

<wcs:ServiceMetadata>
  <wcs:formatSupported>application/gml+xml</wcs:formatSupported>
  <wcs:formatSupported>image/tiff</wcs:formatSupported>
  <wcs:Extension>
    <wcseo:wcseoMetadata>
      <wcseo:defaultPackageFormat>
application/metalink4+xml</wcseo:defaultPackageFormat>
      <wcseo:packageFormatSupported>application/x-gzip</wcseo:packageFormatSupported>
      <wcseo:packageFormatSupported>application/gzip</wcseo:packageFormatSupported>
      <wcseo:packageFormatSupported>application/bzip</wcseo:packageFormatSupported>
      <wcseo:packageFormatSupported>application/x-bzip</wcseo:packageFormatSupported>
      <wcseo:packageFormatSupported>application/tar</wcseo:packageFormatSupported>
      <wcseo:packageFormatSupported>application/x-tar</wcseo:packageFormatSupported>
      <wcseo:packageFormatSupported>application/zip</wcseo:packageFormatSupported>
      <wcseo:packageFormatSupported>
application/metalink4+xml</wcseo:packageFormatSupported>
      <wcseo:packageFormatSupported>
application/metalink+xml</wcseo:packageFormatSupported>
    </wcseo:wcseoMetadata>
  </wcs:Extension>
</wcs:ServiceMetadata>

```

7.3. DescribeCoverage operation

7.3.1. DescribeCoverage request

The *DescribeCoverage* request is unchanged over WCS Core [OGC 09-110r4]. In particular, identifiers of EO Coverages can be passed as input parameters.

NOTE A DescribeCoverage request is possible on the identifiers of EO Coverages offered by the server even if these are not listed in a GetCapabilities response.

7.3.2. DescribeCoverage response

In a *DescribeCoverage* response, EO Coverage descriptions additionally contain the EO Metadata record.

Requirement 48	/req/eowcs/describeCoverage-response-eo-metadata In the response to a successful <i>DescribeCoverage</i> request on an EO Coverage, one EOWCS::EOMetadata element shall be present containing the EO Metadata component of the coverage addressed.
-----------------------	---

The coverage subtype shall indicate the specific type of the coverage returned, in case of an EO Coverage.

Requirement 49	/req/eowcs/describeCoverage-response-coverageSubtype In the response to a successful <i>DescribeCoverage</i> request addressing an EO Coverage, each EO Coverage listed shall contain in its <i>WCS::CoverageSubtype</i> element the value given in Table 8 corresponding to its type.
-----------------------	--

Example: The following XML fragment shows parts of a possible DescribeCoverage response on an EO Coverage:

```

<wcs:CoverageDescriptions>
  <wcs:CoverageDescription gml:id="c1">
    <gml:boundedBy>
      <gml:Envelope axisLabels="lat long" srsDimension="2"
srsName="http://www.opengis.net/def/crs/EPSSG/0/4326" uomLabels="deg deg">
        <gml:lowerCorner>42.862778 1.896944</gml:lowerCorner>
        <gml:upperCorner>43.516667 2.861667</gml:upperCorner>
      </gml:Envelope>
    </gml:boundedBy>
    <wcs:CoverageId>c1</wcs:CoverageId>
    <gmlcov:metadata>
      <gmlcov:Extension>
        <wcseo:EOMetadata>
          <eop:EarthObservation gml:id="eop_c1">
            <om:phenomenonTime>
              <gml:TimePeriod gml:id="tp_c1">
                <gml:beginPosition>2008-03-13T10:00:06.000</gml:beginPosition>
                <gml:endPosition>2008-03-13T10:20:26.000</gml:endPosition>
              </gml:TimePeriod>
            </om:phenomenonTime>
            <om:resultTime>
              <gml:TimeInstant gml:id="archivingdate_c1">
                <gmlcovl:timePosition>2001-08-13T11:02:47.999</gml:timePosition>
              </gml:TimeInstant>
            </om:resultTime>
            <om:procedure />
            <om:observedProperty />
            <om:featureOfInterest>
              <eop:Footprint gml:id="footprint_c1">
                <eop:multiExtentOf>
                  <gml:MultiSurface gml:id="multisurface_c1" srsName="EPSSG:4326">
                    <gml:surfaceMember>
                      <gml:Polygon gml:id="polygon_c1">
                        <gml:exterior>
                          <gml:LinearRing>
                            <gml:posList>
                              43.516667 2.1025 43.381667 2.861667
                              42.862778 2.65 42.996389 1.896944
                              43.516667 2.1025
                            </gml:posList>

```

```

        </gml:LinearRing>

</gmlcov:rangeType>
<wcs:ServiceParameters>
  <wcs:CoverageSubtype>RectifiedDataset</wcs:CoverageSubtype>
  <wcs:nativeFormat>image/tiff</wcs:nativeFormat>
</wcs:ServiceParameters>
</wcs:CoverageDescription>
</wcs:CoverageDescriptions>

```

NOTE The complete example is provided with the schema files being part of this standard.

7.4. *GetCoverage* operation

7.4.1. *GetCoverage* request

The *GetCoverage* request is unchanged over WCS Core [OGC 09-110r4], except that for EO Coverages slicing is disallowed as it would leave the EO Metadata undefined.

NOTE

A *GetCoverage* request is possible on the identifiers of EO Coverages offered by the server even if these are not listed in a *GetCapabilities* response.

Requirement 50	/req/eowcs/getCoverage-request-no-slicing A <i>GetCoverage</i> request on EO Coverages shall not contain a slicing operation.
-----------------------	---

7.4.2. *GetCoverage* response

The *GetCoverage* response is as defined in the WCS Core [OGC 09-110r4], however extended in two respects:

- The coverage returned contains exactly one metadata element holding the EO Metadata record (it may contain further metadata elements in addition);
- The lineage component of the EO Metadata record returned consists of the preexisting lineage sequence plus one element appended which describes the *GetCoverage* request on hand.

NOTE

As always, whether all these elements will be available to a client depends on the degree of support for the information items by the requested coverage encoding.

On EO Coverages, a *GetCoverage* request shall produce a coverage of the type corresponding to the coverage inspected.

Requirement 51	/req/eowcs/getCoverage-response-coverage-type The response to a successful <i>GetCoverage</i> request <ul style="list-style-type: none"> - on a Rectified Stitched Mosaic shall be of type RectifiedStitchedMosaic, - on a Rectified Dataset shall be of type RectifiedDataset, - on a Referenceable Stitched Mosaic shall be of type ReferenceableStitchedMosaic, and - on a Referenceable Dataset shall be of type ReferenceableDataset.
-----------------------	---

The EO Metadata, including the extended lineage record, shall be delivered alongside with the coverage data, adjusted according to the operations executed during *GetCoverage* evaluation.

Requirement 52	/req/eowcs/getCoverage-response-eo-metadata In the response to a successful <i>GetCoverage</i> request on an EO Coverage, the EOWCS::EOMetadata of the coverage returned shall contain the complete EOWCS::EOMetadata of the coverage addressed, adjusted as specified in Requirement 53 /req/eowcs/getCoverage-response-eo-metadata-in-stitched-mosaic , Requirement 54 /req/eowcs/getCoverage-response-footprint-in-eo-metadata , and Requirement 55 /req/eowcs/getCoverage-response-lineage-in-eo-metadata .
-----------------------	---

Requirement 53	/req/eowcs/getCoverage-response-eo-metadata-in-stitched-mosaic In the response to a successful <i>GetCoverage</i> request on a Stitched Mosaic, the EOWCS::EOMetadata of the coverage returned shall contain the original Stitched Mosaic's references to those Datasets which have a non-empty intersection with the effective spatio-temporal request trim interval, and no other ones.
Requirement 54	/req/eowcs/getCoverage-response-footprint-in-eo-metadata If, in a successful <i>GetCoverage</i> request on an EO Coverage, trimming along spatial coordinates is specified then the footprint of the EOWCS::EOMetadata in the coverage returned shall be given by the intersection of the spatial request interval and the footprint of the coverage requested. Otherwise, the footprint in the result coverage shall be given by the footprint of the coverage requested.

The lineage record shall be extended by a reproducible description of the *GetCoverage* request originating this output.

Requirement 55	/req/eowcs/getCoverage-response-lineage-in-eo-metadata In the response to a successful <i>GetCoverage</i> request, the Lineage component shall consist of the Lineage component of the coverage requested with one record appended containing the complete, verbatim <i>GetCoverage</i> request leading to this response.
-----------------------	---

NOTE

This content is dependent on the protocol used by the requester. In case of a GET/KVP request, this will be the request URL with parameters. In case of an XML or SOAP request this will be an XML snippet.

Example: The following XML fragment shows parts of a possible *GetCoverage* response for an EO Coverage:

```
<wcseo:RectifiedDataset xmlns:ows="http://www.opengis.net/ows/2.0"
xmlns:gml="http://www.opengis.net/gml/3.2"

7.5. DescribeEOCoverageSet operation

7.5.1. Overview

A *DescribeEOCoverageSet* request submits one or more Dataset Series, Stitched Mosaic, or Dataset identifiers together with a spatio-temporal subsetting criterion ("bounding box"). The spatial constraint is expressed in WGS84 [4], the temporal constraint in ISO 8601 [2].

The response to a successful request on a Dataset Series consists of a (possibly empty) set of descriptions of Datasets and Stitched Mosaics and a (possibly empty) set of descriptions of Dataset Series. The response to a successful request on a Stitched Mosaic consists of a (possibly empty) set of descriptions of Datasets. In any case, the result items are those ones which are (i) referred to directly or via Dataset Series by the object submitted and (ii) matched by the bounding box. The type of matching - *contains* or *overlaps* - is specified in the request.

7.5.2. DescribeEOCoverageSet request

Requirement 56	/req/eowcs/describeEOCoverageSet-request-structure A <i>DescribeEOCoverageSet</i> request shall consist of a structure as defined in Figure 8, Table 10 and the XML Schema being part of this standard.
-----------------------	---

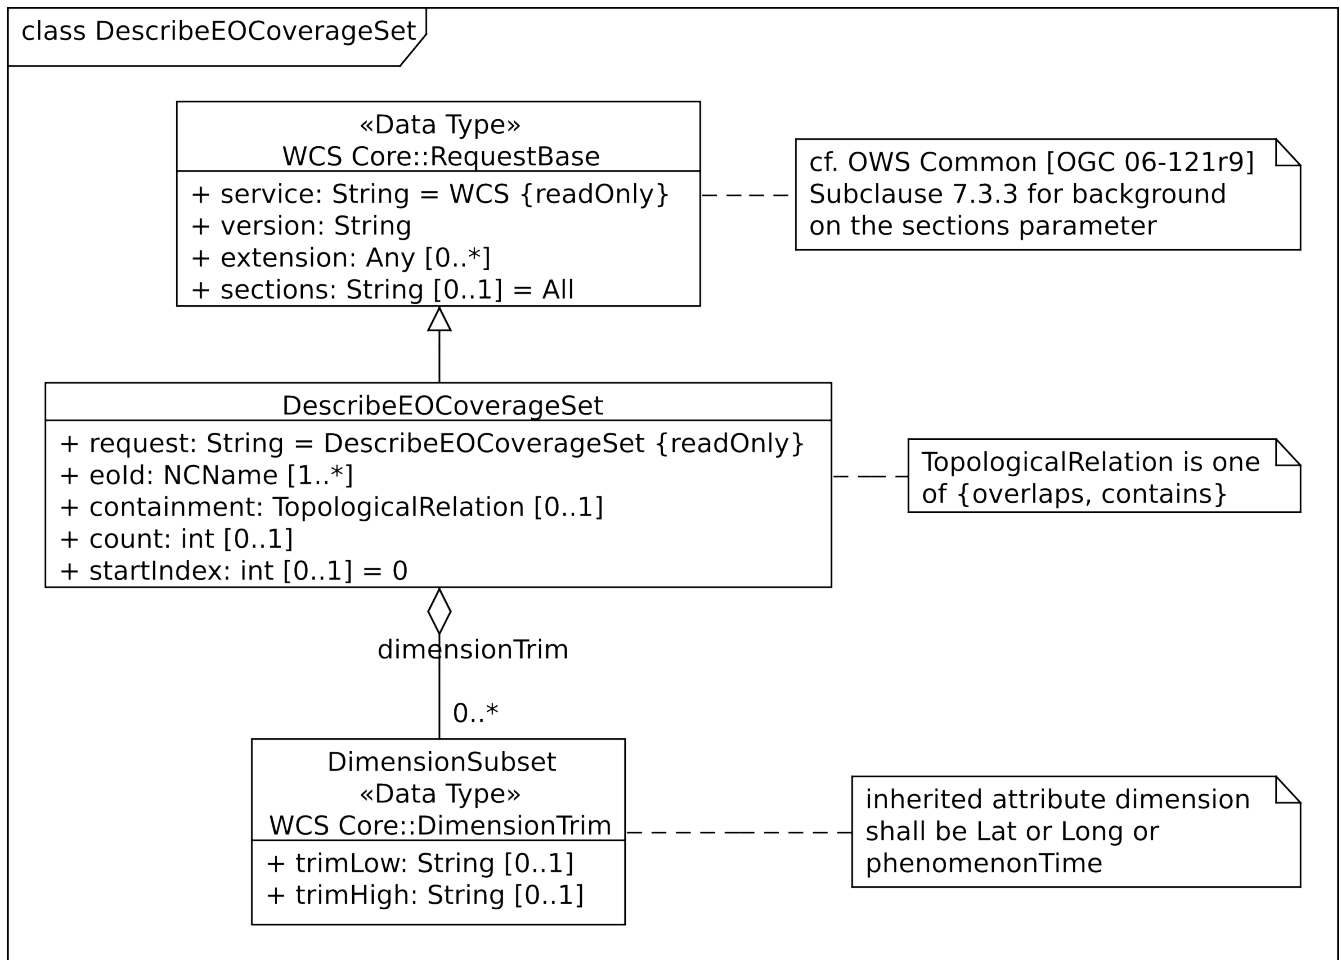

Figure 8. DescribeEOCoverageSet request UML diagram

Table 10. Components of DescribeEOCoverageSet operation request

Name	Definition	Data type	Multiplicity
request	Request name	String, fixed to "DescribeEOCoverageSet"	one (mandatory)
eoId	Identifier of Dataset Series, Stitched Mosaic, or Dataset to be evaluated	NCName	one or more (mandatory)
containment	Intersection mode for evaluation of object bounding box against request parameters	String	zero or one (optional)
count	Maximum number of CoverageDescription and DatasetSeriesDescription elements to be included in the response	Integer greater than zero	zero or one (optional)
startIndex	Index number within the result set from which the server shall begin presenting results in the response (the index number of the first search result is 0)	Integer greater than or equal to zero. Default 0	zero or one (optional)

Name	Definition	Data type	Multiplicity
sections	Unordered list of zero or more names of the XML elements that shall be returned	String	zero or one (optional)
dimensionTrim	trim specification, as per WCS Core [OGC 09-110r4] Subclause 8.4.1	WCS::DimensionTrim	zero or more (optional)

The *DescribeEOCoverageSet* request type contains two sections (cf. [OGC 06-121r9] Clause 7.3.3) whose appearance in the response can be controlled by the client through the optional **sections** parameter.

Requirement 57	<p>/req/eowcs/describeEOCoverageSet-request-sections</p> <p>If a <i>DescribeEOCoverageSet</i> request contains an ows: Sections element then this element shall contain one of the values "CoverageDescriptions", "DatasetSeriesDescriptions", or "All". Dependency: [OGC 06-121r9] clause 7.3.3</p>
-----------------------	--

NOTE

This use of the sections parameter is similar to its use in *GetCapabilities* as defined in OWS Common [OGC 06-121r9].

Requirement 58	<p>/req/eowcs/describeEOCoverageSet-request-eoId</p> <p>Each eoId parameter value in a <i>DescribeEOCoverageSet</i> request shall be equal to the identifier of a Dataset, a Stitched Mosaic, or a Dataset Series offered by the server addressed.</p>
-----------------------	--

NOTE

A *DescribeEOCoverageSet* request is possible on the identifiers of objects offered by the server even if these are not listed in a *GetCapabilities* response.

Requirement 59	<p>/req/eowcs/describeEOCoverageSet-request-containment</p> <p>If a <i>DescribeEOCoverageSet</i> request contains a containment parameter then this parameter shall have one of the values "contains" or "overlaps".</p>
-----------------------	--

Requirement 60	<p>/req/eowcs/describeEOCoverageSet-request-dimensions</p> <p>If a <i>DescribeEOCoverageSet</i> request contains dimensionTrim elements with dimension parameters then each such dimension parameter shall have one of the values "lat", "long", or "phenomenonTime". Each of these values shall appear at most once in a given request.</p>
-----------------------	---

Requirement 61	<p>/req/eowcs/describeEOCoverageSet-request-crs</p> <p>A <i>DescribeEOCoverageSet</i> request shall use WGS84 [4] as spatial and ISO 8601 [2] as temporal CRS for the coordinates in trim requests.</p>
-----------------------	--

NOTE Trim coordinates are not required to lie within the boundaries of the EO Coverage inquired.

Example: The following XML instance shows a possible *DescribeEOCoverageSet* operation request:

```
<wcseo:DescribeEOCoverageSet xmlns:wcseo="http://www.opengis.net/wcs/wcseo/1.1"
xmlns:wcs="http://www.opengis.net/wcs/2.0"
xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance"
xsi:schemaLocation="http://www.opengis.net/wcs/wcseo/1.1
http://schemas.opengis.net/wcs/wcseo/1.1/wcsEOAll.xsd" service="WCS" version="2.0.1"
count="100" startIndex="0">
  <wcseo:eoId>DS1</wcseo:eoId>
  <wcseo:containment>overlaps</wcseo:containment>
  <wcseo:sections>
    <wcseo:section>All</wcseo:section>
  </wcseo:sections>
  <wcs:DimensionTrim>
    <wcs:Dimension>long</wcs:Dimension>
    <wcs:TrimLow>16</wcs:TrimLow>
    <wcs:TrimHigh>18</wcs:TrimHigh>
  </wcs:DimensionTrim>
  <wcs:DimensionTrim>
    <wcs:Dimension>lat</wcs:Dimension>
    <wcs:TrimLow>40</wcs:TrimLow>
    <wcs:TrimHigh>42</wcs:TrimHigh>
  </wcs:DimensionTrim>
  <wcs:DimensionTrim>
    <wcs:Dimension>phenomenonTime</wcs:Dimension>
    <wcs:TrimLow>2008-03-13T10:10:00Z</wcs:TrimLow>
    <wcs:TrimHigh>2008-03-13T10:11:00Z</wcs:TrimHigh>
  </wcs:DimensionTrim>
</wcseo:DescribeEOCoverageSet>
```

7.5.3. *DescribeEOCoverageSet* response

The response to a successful *DescribeEOCoverageSet* request consists of a (possibly empty) set of EO Coverage descriptions and a (possibly empty) set of Dataset Series descriptions (cf. Figure 9).

Requirement 62	/req/eowcs/describeEOCoverageSet-response-structure The response to a successful <i>DescribeEOCoverageSet</i> request shall consist of a EOWCS::EOCoverageSetDescription structure as defined in Table 11, Figure 9 and the XML Schema being part of this standard. Dependency: [OGC 09-110r4] Subclause 8.3.2 (http://www.opengis.net/doc/IS/WCS/2.0/clause/8)
-----------------------	---

Table 11. Components of **EOCoverageSetDescription** structure

Name	Definition	Data type	Multiplicity
datasetSeriesDescriptions	Unordered sequence of DatasetSeries descriptions	DatasetSeriesDescriptions	zero or one (optional)
coverageDescriptions	Unordered sequence of coverage descriptions	WCS::CoverageDescriptions	zero or one (optional)

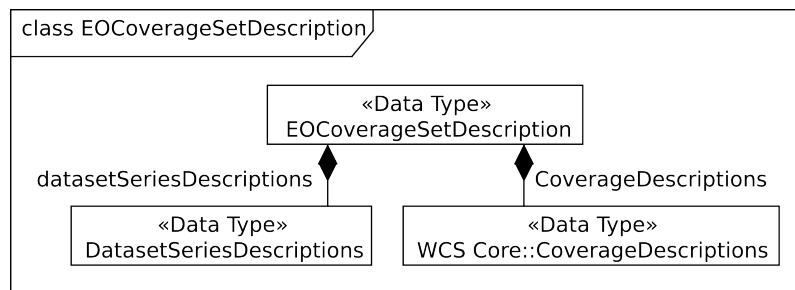

Figure 9. *DescribeEOCoverageSet* response UML diagram

Requirement 63	/req/eowcs/describeEOCoverageSet-response-eo-metadata Each WCS::CoverageDescription listed in the response to a successful <i>DescribeEOCoverageSet</i> request shall contain one EOWCS::EOMetadata element containing the EO Metadata component of the EO Coverage to be described.
-----------------------	--

The response shall respect the **sections** request parameter.

Requirement 64	/req/eowcs/describeEOCoverageSet-response-section-coverageDescriptions If a <i>DescribeEOCoverageSet</i> request contains a sections parameter then a successful response shall contain a wcs:CoverageDescriptions element if and only if the section parameter list contains one of the values "CoverageDescriptions" or "All".
-----------------------	--

Requirement 65	<p>/req/eowcs/describeEOCoverageSet-response-section-datasetSeriesDescriptions</p> <p>If a <i>DescribeEOCoverageSet</i> request contains a sections parameter then a successful response shall contain a wcseo:DatasetSeriesDescriptions element if and only if the section parameter list contains one of the values "DatasetSeriesDescriptions" or "All".</p>
-----------------------	--

Such a response contains only EO Coverages directly referred to by the object(s) addressed in the request or via referred Dataset Series.

Requirement 66	<p>/req/eowcs/describeEOCoverageSet-response-eoId</p> <p>In the response to a successful <i>DescribeEOCoverageSet</i> request containing a wcs:CoverageDescriptions section, each EO Coverage referred to by one of the objects identified in the eoId request parameter shall appear at most once.</p>
-----------------------	--

Requirement 67	<p>/req/eowcs/describeEOCoverageSet-response-referred</p> <p>The response to a successful <i>DescribeEOCoverageSet</i> request containing a wcs:CoverageDescriptions section shall contain the descriptions of exactly those EO Coverages referred to directly or indirectly via Dataset Series by one of the objects identified in the eoId request parameter, without any duplicates.</p>
-----------------------	--

NOTE

A Dataset referred to by a Dataset Series referred to by another Dataset Series is implicitly referred to by the later Dataset Series and thus always reported by a *DescribeEOCoverageSet* request against the later Dataset Series. However, it is allowed that such a Dataset is also referred to by the first Dataset Series but it is only reported once.

NOTE

A Dataset referred to by a Stitched Mosaic referred to by a Dataset Series is not per se referred to by that Dataset Series and thus not reported by a *DescribeEOCoverageSet* request against the Dataset Series. However, it is allowed that such a Dataset is also referred to by the enclosing Dataset Series.

Spatial subsetting is evaluated against the **eop:Footprint** element contained in the **EOMetadata** element of an EO Coverage.

Requirement 68	<p>/req/eowcs/describeEOCoverageSet-response-containment</p> <p>The response to a successful <i>DescribeEOCoverageSet</i> request containing a wcs:CoverageDescriptions section shall contain only descriptions of those EO Coverages whose spatial footprint defined by its eop:EarthObservation/om:featureOfInterest/eop:Footprint</p> <ul style="list-style-type: none"> - overlaps with the spatial request extent, and the request parameter containment is of value overlaps or is omitted, - is completely contained within the spatial request extent, and the request parameter containment is of value contains <p>whereby all spatial coordinates are expressed in WGS84 [4].</p>
-----------------------	---

Temporal subsetting is evaluated against the temporal validity of an EO Coverage.

Requirement 69	<p>/req/eowcs/describeEOCoverageSet-response-phenomenonTime</p> <p>The response to a successful <i>DescribeEOCoverageSet</i> request containing a wcs:CoverageDescriptions section shall contain only descriptions of EO Coverages whose time interval defined by its eop:EarthObservation/om:phenomenonTime/gml:TimePeriod/gml:beginPosition and eop:EarthObservation/om:phenomenonTime/gml:TimePeriod/gml:endPosition elements in wcseo:EOMetadata</p> <ul style="list-style-type: none"> - overlaps with the request time extent, and the request parameter containment is of value overlaps or is omitted, - is completely contained within the request time extent, and the request parameter containment is of value contains, <p>whereby all temporal coordinates are expressed in ISO 8601 [2].</p>
-----------------------	--

Boundary values omitted are substituted by the actual boundary value of the object inquired.

Requirement 70	<p>/req/eowcs/describeEOCoverageSet-response-trim-omitted</p> <p>In a <i>DescribeEOCoverageSet</i> request, a trim specification omitted shall be interpreted as the actual boundary of the objects requested in the axis omitted.</p>
Requirement 71	<p>/req/eowcs/describeEOCoverageSet-response-bound-omitted</p> <p>In a <i>DescribeEOCoverageSet</i> request, a lower or upper bound omitted shall be interpreted as indicating the actual lower or upper bound of the objects requested in the axis omitted.</p>

NOTE This trim semantics is analogous to trimming in *GetCoverage*.

Requirement 72	/req/eowcs/describeEOCoverageSet-response-coverageSubtype In the response to a successful <i>DescribeEOCoverageSet</i> request, each EO Coverage listed shall contain in its WCS::CoverageSubtype element the corresponding value given in Table 8 according to its type.
-----------------------	--

Requirement 73	/req/eowcs/describeEOCoverageSet-response-count In the response to a successful <i>DescribeEOCoverageSet</i> request the sum of CoverageDescription and DatasetSeriesDescription elements shall be less or equal to the minimum of the value of the CountDefault element and the count parameter if present in the request. If none of both are present all matching elements shall be reported.
-----------------------	---

NOTE The **count** parameter is used in the same ways as the **itemsPerPage** element in the OpenSearch Specification [\[7\]](#).

Requirement 74	/req/eowcs/describeEOCoverageSet-response-startIndex If a <i>DescribeEOCoverageSet</i> request contains a wcs:startIndex parameter then a successful response shall contain only those CoverageDescription and DatasetSeriesDescription elements whose index numbers in the result set are equal or higher than the value of the startIndex parameter.
-----------------------	--

NOTE A server is assumed to apply a consistent ordering to the result set.

Requirement 75	/req/eowcs/describeEOCoverageSet-response-numberMatched The response to a successful <i>DescribeEOCoverageSet</i> request shall report in its numberMatched attribute the sum of all matching CoverageDescription and DatasetSeriesDescription elements.
-----------------------	---

Requirement 76	/req/eowcs/describeEOCoverageSet-response-numberReturned The response to a successful <i>DescribeEOCoverageSet</i> request shall report in its numberReturned attribute the sum of all CoverageDescription and DatasetSeriesDescription elements included in the response.
-----------------------	---

Requirement 77	/req/eowcs/describeEOCoverageSet-response-startIndex-attr The response to a successful <i>DescribeEOCoverageSet</i> request shall report in its startIndex attribute the index number of the first element in the result set of all CoverageDescription and DatasetSeriesDescription elements returned.
-----------------------	--

Requirement 78	/req/eowcs/describeEOCoverageSet-response-next The response to a successful <i>DescribeEOCoverageSet</i> request shall report in its next attribute the URI to retrieve the next page of results as specified by the count and startIndex parameters. The next attribute shall only be present if elements with a higher index in the result set than the returned ones are available.
-----------------------	---

Requirement 79	/req/eowcs/describeEOCoverageSet-response-previous The response to a successful <i>DescribeEOCoverageSet</i> request shall report in its previous attribute the URI to retrieve the previous page of results as specified by the count and startIndex parameters. The previous attribute shall only be present if elements with a lower index in the result set than the returned ones are available.
-----------------------	--

NOTE

The specific format of the next and previous URIs is implementation dependent as are the details of how or if the server caches the results of an operation in order to be able to present them to the client one subset at a time.

NOTE

The **count**, **startIndex**, **next**, and **previous** parameters used for paging are defined in the same way as in the OpenGIS Web Feature Service 2.0 Interface Standard [8].

Example: The following XML fragment shows parts of a possible *DescribeEOCoverageSet* operation response:

```

<wcseo:E0CoverageSetDescription numberMatched="2" numberReturned="2" startIndex="0">
  <wcs:CoverageDescriptions>
    <wcs:CoverageDescription gml:id="c1">
      <gml:boundedBy>
        ...
      </gml:boundedBy>
      <wcs:CoverageId>c1</wcs:CoverageId>
      <gmlcov:metadata>
        <gmlcov:Extension>
          <wcseo:E0Metadata>
            <eop:EarthObservation gml:id="c1_metadata">
              ...
            </eop:EarthObservation>
          </wcseo:E0Metadata>
        </gmlcov:Extension>
      </gmlcov:metadata>
      <gml:domainSet>
        ...
      </gml:domainSet>
      <gmlcov:rangeType>
        ...
      </gmlcov:rangeType>
      <wcs:ServiceParameters>
        <wcs:CoverageSubtype>RectifiedStitchedMosaic</wcs:CoverageSubtype>
        <wcseo:dataset>
          <wcs:CoverageId>c3</wcs:CoverageId>
        </wcseo:dataset>
      </wcs:ServiceParameters>
    </wcs:CoverageDescription>
  </wcs:CoverageDescriptions>
  <wcseo:DatasetSeriesDescriptions>
    <wcseo:DatasetSeriesDescription gml:id="ds2">
      <gml:boundedBy>
        <gml:Envelope axisLabels="lat long" srsDimension="2"
srsName="http://www.opengis.net/def/crs/EPSG/0/4326" uomLabels="deg deg">

      </gml:TimePeriod>
    </wcseo:DatasetSeriesDescription>
  </wcseo:DatasetSeriesDescriptions>
</wcseo:E0CoverageSetDescription>

```

7.5.4. DescribeEOCoverageSet exceptions

Table 12. Exception codes for DescribeEOCoverageSet operation

exceptionCode value	HTTP code	Meaning of exception code	locator value
NoSuchDatasetSeriesOrCoverage	404	The identifier passed does not match with any of the DatasetSeries or EO Coverages offered by this server	List of violating Dataset Series and/or EO Coverage identifiers

7.6. GetEOCoverageSet operation

7.6.1. Overview

Just like the *DescribeEOCoverageSet* request a *GetEOCoverageSet* request submits one or more Dataset Series, Stitched Mosaic, or Dataset identifiers together with a spatio-temporal subsetting criterion ("bounding box"). By default, the spatial constraint is expressed in WGS84 [4], the temporal constraint in ISO 8601 [2].

Additionally, the *GetEOCoverageSet* request allows to submit simple processing like scaling, interpolation, output CRS, format, and actually applying the subsetting.

The response to a successful request on a Dataset Series consists of a (possibly empty) set of coverages of Datasets and Stitched Mosaics. The response to a successful request on a Stitched Mosaic consists of a (possibly empty) set of coverages of Datasets. In any case, the result items are those ones which are (i) referred to directly or via Dataset Series by the object submitted and (ii) matched by the bounding box. The type of matching - **contains** or **overlaps** - is specified in the request.

NOTE

Using the *GetEOCoverageSet* operation allows to retrieve entire or subsetting coverages in their native or any given format with limited processing like subsetting or scaling applied. To request advanced processing the *GetCoverage* operation may be used.

7.6.2. GetEOCoverageSet request

Requirement 80	<p>/req/eowcs_geteocoverageset/getEOCoverageSet-request-structure</p> <p>A <i>GetEOCoverageSet</i> request shall consist of a structure as defined in Figure 10, Table 13 and the XML Schema being part of this standard.</p>
-----------------------	--

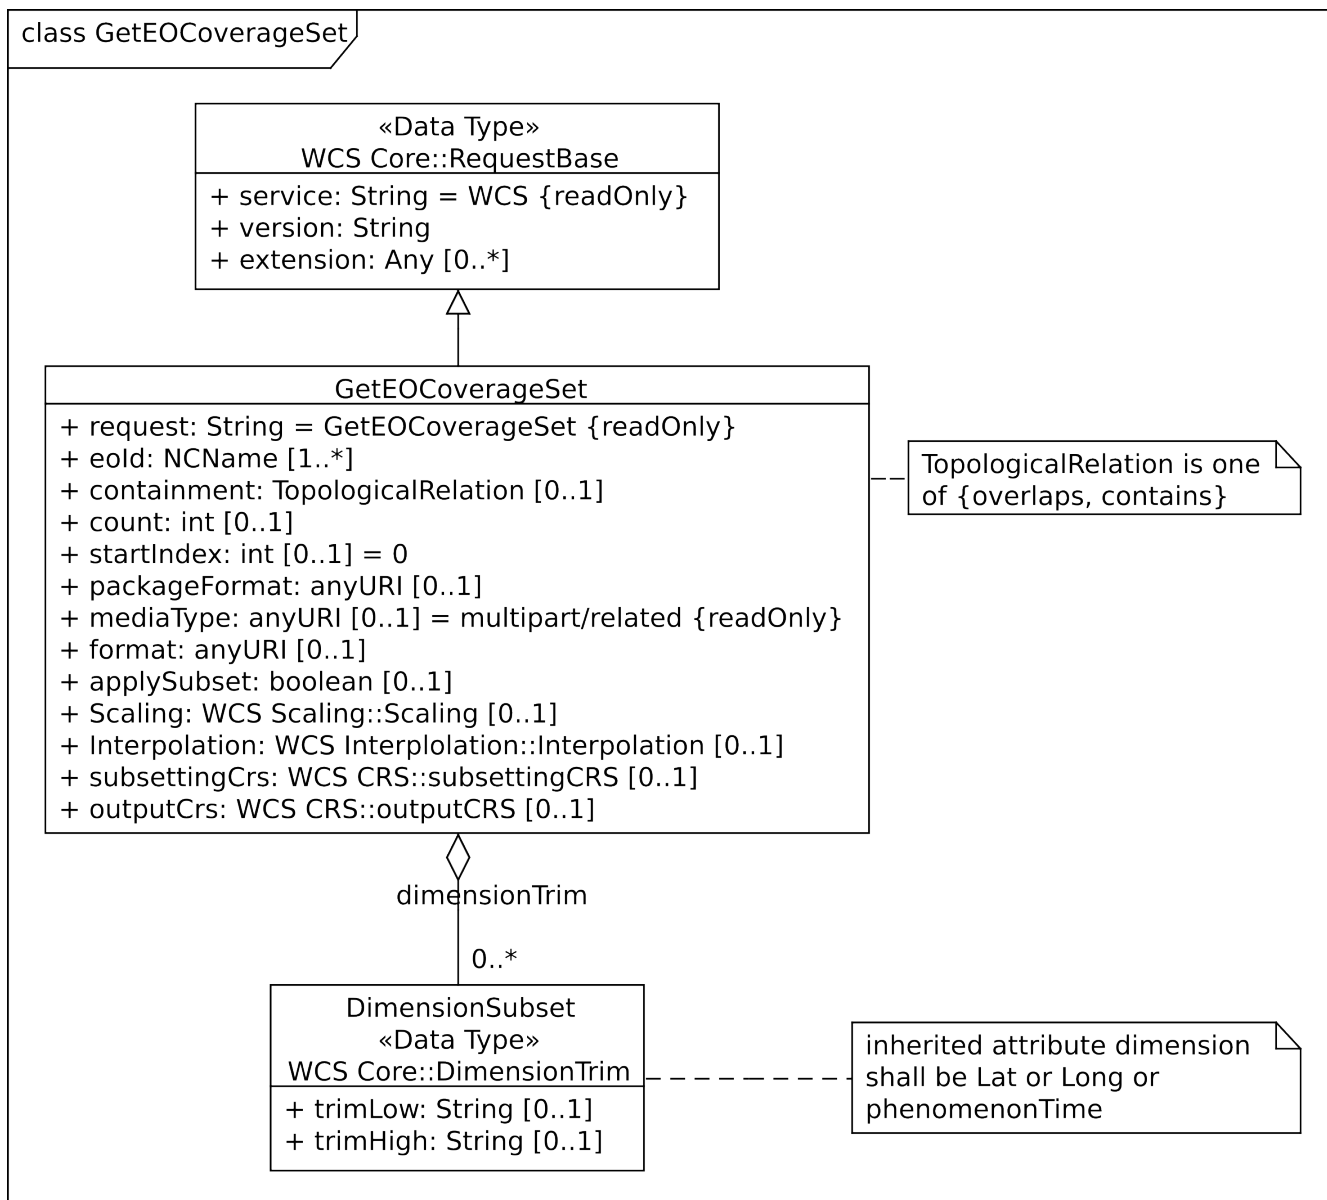

Figure 10. GetEOCoverageSet request UML diagram

Table 13. Components of GetEOCoverageSet operation request

Name	Definition	Data type	Multiplicity
request	Request name	String , fixed to "GetEOCoverageSet"	one (mandatory)
eoId	Identifier of Dataset Series, Stitched Mosaic, or Dataset to be evaluated	NCName	one or more (mandatory)
containment	Intersection mode for evaluation of object bounding box against request parameters	String	zero or one (optional)
count	Maximum number of WCS::Coverage elements to be included in the response	Integer greater than zero	zero or one (optional)

Name	Definition	Data type	Multiplicity
<code>startIndex</code>	Index number within the result set from which the server shall begin presenting results in the response (the index number of the first search result is 0)	<code>Integer</code> greater than or equal to zero. Default 0	zero or one (optional)
<code>dimensionTrim</code>	trim specification, as per WCS Core [OGC 09-110r4] Subclause 8.4.1	<code>WCS::DimensionTrim</code>	zero or more (optional)
<code>packageFormat</code>	MIME type identifier of the format in which the coverages returned are to be packaged e.g., <code>application/x-gzip</code>	<code>anyURI</code>	zero or one (optional)
<code>mediaType</code>	If present, enforces a multipart encoding	<code>anyURI</code> , fixed to "multipart/related"	zero or one (optional)
<code>format</code>	MIME type identifier of the format in which the coverages returned are to be encoded	<code>anyURI</code>	zero or one (optional)
<code>applySubset</code>	Determining if the given subset should be applied to the coverages returned	<code>boolean</code>	zero or one (optional)
<code>Scaling</code>	Scaling to be applied to coverages returned	<code>scal:Scaling</code>	zero or one (optional)
<code>Interpolation</code>	Interpolation method to be applied on all axes during <i>GetEOCoverageSet</i> result preparation	<code>int:Interpolation</code>	zero or one (optional)
<code>subsettingCrs</code>	CRS Identifier indicating the CRS in which the request subsetting coordinates are expressed	<code>crs:subsettingCrs</code>	zero or one (optional)
<code>outputCrs</code>	CRS Identifier indicating the CRS of the result coverages	<code>crs:outputCrs</code>	zero or one (optional)

Requirement 81	<p>/req/eowcs_geteocoverageset/getEOCoverageSet-request-eoId</p> <p>Each eoId parameter value in a <i>GetEOCoverageSet</i> request shall be equal to the identifier of a Dataset, a Stitched Mosaic, or a Dataset Series offered by the server addressed.</p>
-----------------------	---

NOTE

A *GetEOCoverageSet* request is possible on the identifiers of objects offered by the server even if these are not listed in a *GetCapabilities* response.

Requirement 82	/req/eowcs_geteocoverageset/getEOCoverageSet-request-containment If a <i>GetEOCoverageSet</i> request contains a containment parameter then this parameter shall have one of the values "contains" or "overlaps".
-----------------------	--

The subsetting is interpreted similar to the *DescribeEOCoverageSet* operation. In addition alternative subsetting is allowed using the **subsettingCrs** parameter as defined by the WCS CRS Extension [OGC 11-053r1].

Requirement 83	/req/eowcs_geteocoverageset/getEOCoverageSet-request-dimensions If a <i>GetEOCoverageSet</i> request contains dimensionTrim elements with dimension parameters and no subsettingCrs element then each such dimension parameter shall have one of the values "lat", "long", or "phenomenonTime". Each of these values shall appear at most once in a given request.
-----------------------	---

Requirement 84	/req/eowcs_geteocoverageset/getEOCoverageSet-request-crs A <i>GetEOCoverageSet</i> request shall use WGS84 [4] as spatial and ISO 8601 [2] as temporal CRS for the coordinates in trim requests if no subsettingCrs element is present.
-----------------------	--

NOTE

Trim coordinates are not required to lie within the boundaries of the EO Coverage inquired.

The package encoding format in which the coverages are returned is specified by the combination of the **packageFormat** and **mediaType** parameters. Admissible values (i.e, package formats supported) are those listed in the server's Capabilities document. The default is the also reported in the server's Capabilities document.

Requirement 85	/req/eowcs_geteocoverageset/getEOCoverageSet-acceptable-packageFormat If a <i>GetCoverage</i> request contains a packageFormat parameter then this parameter shall contain a MIME type identifier occurring in some wcseo:packageFormatSupported element of the response to a successful <i>GetCapabilities</i> request to this server.
-----------------------	---

Requirement 86	/req/eowcs_geteocoverageset/getEOCoverageSet-acceptable-mediaType If a <i>GetCoverage</i> request contains a mediaType parameter then this parameter shall contain a MIME type identifier of fixed value "multipart/related" .
-----------------------	---

The encoding format in which the coverages themselves are returned is specified by the **format**

parameter. Admissible values (i.e, formats supported) are those listed in the server's Capabilities document. Note that only one format applicable for all coverages to be returned can be specified. Default is the coverage's Native Format of each coverage to be returned.

Requirement 87	/req/eowcs_geteocoverageset/getEOCoverageSet-acceptable-format If a <i>GetCoverage</i> request contains a format parameter then this parameter shall contain a MIME type identifier occurring in some wcs:formatSupported element of the response to a successful <i>GetCapabilities</i> request to this server.
-----------------------	--

A general scaling and interpolation can be requested that is equally applied to all coverages returned.

Requirement 88	/req/eowcs_geteocoverageset/getEOCoverageSet-acceptable-scaling If a <i>GetCoverage</i> request contains a Scaling parameter then this parameter shall follow the specification given in the WCS Scaling Extension [OGC 12-039].
-----------------------	---

Requirement 89	/req/eowcs_geteocoverageset/getEOCoverageSet-acceptable-interpolation If a <i>GetCoverage</i> request contains a Interpolation parameter then this parameter shall follow the specification given in the WCS Interpolation Extension [OGC 12-049].
-----------------------	---

A general output CRS as well as CRS for subsetting can be requested that is equally applied to all coverages returned.

Requirement 90	/req/eowcs_geteocoverageset/getEOCoverageSet-acceptable-crss If a <i>GetCoverage</i> request contains a subsettingCrS and/or outputCrS parameter then this parameter(s) shall follow the specification given in the WCS CRS Extension [OGC 11-053r1].
-----------------------	---

Example: The following XML instance shows a possible *GetEOCoverageSet* operation request:

```

<?xml version="1.0" encoding="UTF-8"?>
<wcseo:GetEOCoverageSet xmlns:wcseo="http://www.opengis.net/wcs/wcseo/1.1"

  </wscrs:subsettingCrs>
</wcseo:GetEOCoverageSet>

```

7.6.3. GetEOCoverageSet response

The response to a successful *GetEOCoverageSet* request consists of a (possibly empty) packaged set of EO Coverages. Each individual coverage itself is structured the same way as resulting from a

GetCoverage request.

Requirement 91	<p>/req/eowcs_geteocoverageset/getEOCoverageSet-packageFormat</p> <p>The contents of the response to a successful <i>GetEOCoverageSet</i> request shall be encoded as specified by the packageFormat parameter, if this parameter is present in the request, and in the service's default package format as reported in the wcseo:defaultPackageFormat element of the Capabilities if this parameter is not present.</p>
Requirement 92	<p>/req/eowcs_geteocoverageset/getEOCoverageSet-multipart</p> <p>The response to a successful <i>GetEOCoverageSet</i> request containing a mediaType parameter with value multipart/related shall follow the definitions of conformance class <i>multipart</i> of the OGC® Coverage Implementation Schema [OGC 09-146r2]. Dependency: http://www.opengis.net/spec/GMLCOV/1.0/conf/multipart</p>
Requirement 93	<p>/req/eowcs_geteocoverageset/getEOCoverageSet-mediaType</p> <p>The response to a successful <i>GetEOCoverageSet</i> request containing a mediaType parameter with value multipart/related shall consist of a wcseo:EOCoverageSet structure as defined in the XML Schema being part of this standard in its first part. The second part of the multipart response shall be encoded as specified by Requirement 91 /req/eowcs_geteocoverageset/getEOCoverageSet-packageFormat.</p>
Requirement 94	<p>/req/eowcs_geteocoverageset/getEOCoverageSet-cid</p> <p>The first part of the response to a successful <i>GetEOCoverageSet</i> request containing a mediaType parameter with value multipart/related shall reference individual coverages inside the package in the second part of the multipart response by appending the filename after a ; character to the cid.</p>
NOTE	The usage of cid is defined in [OGC 09-146r2].
Requirement 95	<p>/req/eowcs_geteocoverageset/getEOCoverageSet-format</p> <p>The EO Coverages contained in the response to a successful <i>GetEOCoverageSet</i> request shall be encoded as specified by the format parameter, if this parameter is present, and in the coverage's Native Format if this parameter is not present.</p>

The requirements defined for the *GetCoverage* response like containing EO Metadata or adding a lineage component apply to each EO Coverage included in a *GetEOCoverageSet* response package.

Requirement 96	/req/eowcs/geteocoverageset/getEOCoverageSet-getCoverage Each EO Coverage contained in the response to a successful <i>GetEOCoverageSet</i> request shall adhere to the requirements defined for the <i>GetCoverage</i> response in subclause GetCoverage response .
-----------------------	--

A *GetEOCoverageSet* response contains only EO Coverages directly referred to by the object(s) addressed in the request or via referred Dataset Series.

Requirement 97	/req/eowcs/getEOCoverageSet-response-eoId In the response to a successful <i>GetEOCoverageSet</i> request each EO Coverage referred to by one of the objects identified in the eoId request parameter shall appear at most once.
-----------------------	---

Requirement 98	/req/eowcs/getEOCoverageSet-response-referred The response to a successful <i>GetEOCoverageSet</i> request shall contain exactly those EO Coverages referred to directly or indirectly via Dataset Series by one of the objects identified in the eoId request parameter, without any duplicates.
-----------------------	--

NOTE	A Dataset referred to by a Dataset Series referred to by another Dataset Series is implicitly referred to by the later Dataset Series and thus always reported by a <i>GetEOCoverageSet</i> request against the later Dataset Series. However, it is allowed that such a Dataset is also referred to by the first Dataset Series but it is only reported once.
NOTE	A Dataset referred to by a Stitched Mosaic referred to by a Dataset Series is not per se referred to by that Dataset Series and thus not reported by a <i>GetEOCoverageSet</i> request against the Dataset Series. However, it is allowed that such a Dataset is also referred to by the enclosing Dataset Series.

Spatial subsetting is evaluated against the **eop:Footprint** element contained in the **EOMetadata** element of an EO Coverage.

Requirement 99	/req/eowcs/getEOCoverageSet-response-containment The response to a successful <i>GetEOCoverageSet</i> request shall contain only those EO Coverages whose spatial footprint defined by its eop:EarthObservation/om:featureOfInterest/eop:Footprint - overlaps with the spatial request extent, and the request parameter containment is of value overlaps or is omitted, - is completely contained within the spatial request extent, and the request parameter containment is of value contains whereby all spatial coordinates are expressed in WGS84 [4] if no subsettingCrs parameter is present.
-----------------------	---

Temporal subsetting is evaluated against the temporal validity of an EO Coverage.

Requirement 100	<p>/req/eowcs/getEOCoverageSet-response-phenomenonTime</p> <p>The response to a successful <i>GetEOCoverageSet</i> request shall contain only EO Coverages whose time interval defined by its <i>eop:EarthObservation/om:phenomenonTime/gml:TimePeriod/gml:beginPosition</i> and <i>eop:EarthObservation/om:phenomenonTime/gml:TimePeriod/gml:endPosition</i> elements in <i>wcseo:EOMetadata</i></p> <ul style="list-style-type: none"> - overlaps with the request time extent, and the request parameter <i>containment</i> is of value <i>overlaps</i> or is omitted, - is completely contained within the request time extent, and the request parameter <i>containment</i> is of value <i>contains</i>, <p>whereby all temporal coordinates are expressed in ISO 8601 [2] if no <i>subsettingCrs</i> parameter is present.</p>
------------------------	---

Boundary values omitted are substituted by the actual boundary value of the object inquired.

Requirement 101	<p>/req/eowcs/getEOCoverageSet-response-trim-omitted</p> <p>In a <i>GetEOCoverageSet</i> request, a trim specification omitted shall be interpreted as the actual boundary of the objects requested in the axis omitted.</p>
------------------------	---

Requirement 102	<p>/req/eowcs/getEOCoverageSet-response-bound-omitted</p> <p>In a <i>GetEOCoverageSet</i> request, a lower or upper bound omitted shall be interpreted as indicating the actual lower or upper bound of the objects requested in the axis omitted.</p>
------------------------	---

NOTE This trim semantics is analogous to trimming in *GetCoverage*.

Requirement 103	<p>/req/eowcs/getEOCoverageSet-response-count</p> <p>In the response to a successful <i>GetEOCoverageSet</i> request the sum of <i>RectifiedDataset</i>, <i>ReferenceableDataset</i>, <i>RectifiedStitchedMosaic</i>, <i>ReferenceableStitchedMosaic</i>, and <i>DatasetSeries</i> elements shall be less or equal to the minimum of the value of the <i>CountDefault</i> element and the <i>count</i> parameter if present in the request. If none of both are present all matching elements shall be reported.</p>
------------------------	--

NOTE The *count* parameter is used in the same ways as the *itemsPerPage* element in the OpenSearch Specification [7].

Requirement 104	<p>/req/eowcs/getEOCoverageSet-response-startIndex</p> <p>If a <i>GetEOCoverageSet</i> request contains a wcs:startIndex parameter then a successful response shall contain only those RectifiedDataset, ReferenceableDataset, RectifiedStitchedMosaic, ReferenceableStitchedMosaic, and DatasetSeries elements whose index numbers in the result set are equal or higher than the value of the startIndex parameter.</p>
------------------------	---

NOTE A server is assumed to apply a consistent ordering to the result set.

Requirement 105	<p>/req/eowcs/getEOCoverageSet-response-numberMatched</p> <p>The response to a successful <i>GetEOCoverageSet</i> request shall report in its numberMatched attribute the sum of all matching RectifiedDataset, ReferenceableDataset, RectifiedStitchedMosaic, ReferenceableStitchedMosaic, and DatasetSeries elements.</p>
------------------------	--

Requirement 106	<p>/req/eowcs/getEOCoverageSet-response-numberReturned</p> <p>The response to a successful <i>GetEOCoverageSet</i> request shall report in its numberReturned attribute the sum of all RectifiedDataset, ReferenceableDataset, RectifiedStitchedMosaic, ReferenceableStitchedMosaic, and DatasetSeries elements included in the response.</p>
------------------------	--

Requirement 107	<p>/req/eowcs/getEOCoverageSet-response-startIndex-attr</p> <p>The response to a successful <i>GetEOCoverageSet</i> request shall report in its startIndex attribute the index number of the first element in the result set of all RectifiedDataset, ReferenceableDataset, RectifiedStitchedMosaic, ReferenceableStitchedMosaic, and DatasetSeries elements returned.</p>
------------------------	---

Requirement 108	<p>/req/eowcs/getEOCoverageSet-response-next</p> <p>The response to a successful <i>GetEOCoverageSet</i> request shall report in its next attribute the URI to retrieve the next page of results as specified by the count and startIndex parameters. The next attribute shall only be present if elements with a higher index in the result set than the returned ones are available.</p>
------------------------	--

Requirement 109	<p>/req/eowcs/getEOCoverageSet-response-previous</p> <p>The response to a successful <i>GetEOCoverageSet</i> request shall report in its previous attribute the URI to retrieve the previous page of results as specified by the count and startIndex parameters. The previous attribute shall only be present if elements with a lower index in the result set than the returned ones are available.</p>
------------------------	---

NOTE

The specific format of the next and previous URIs is implementation dependent as are the details of how or if the server caches the results of an operation in order to be able to present them to the client one subset at a time.

NOTE

The **count**, **startIndex**, **next**, and **previous** parameters used for paging are defined in the same way as in the OpenGIS Web Feature Service 2.0 Interface Standard [8].

The spatial subsetting requested may be applied to the EO Coverages to be returned. Default is to respond with entire coverages.

Requirement 110	<p>/req/eowcs/getEOCoverageSet-response-applySubset</p> <p>Each EO Coverage contained in the response to a successful <i>GetEOCoverageSet</i> request containing an applySubset parameter with value true shall be subsetting as specified by the <i>crs-gridded-coverage</i> conformance class of the WCS CRS Extension [OGC 11-053r1].</p>
------------------------	---

A requested general scaling and interpolation is equally applied to all coverages returned.

Requirement 111	<p>/req/eowcs_geteocoverageset/getEOCoverageSet-scaling</p> <p>If a <i>GetCoverage</i> request contains a Scaling parameter then this parameter shall be applied individually to each EO Coverage to be returned as specified by the WCS Scaling Extension [OGC 12-039].</p>
------------------------	--

Requirement 112	<p>/req/eowcs_geteocoverageset/getEOCoverageSet-interpolation</p> <p>If a <i>GetCoverage</i> request contains a Interpolation parameter then this parameter shall be applied individually to each EO Coverage to be returned as specified by the WCS Interpolation Extension [OGC 12-049].</p>
------------------------	--

A requested general output CRS as well as CRS for subsetting is equally applied to all coverages returned.

Requirement 113	<p>/req/eowcs_geteocoverageset/getEOCoverageSet-crss</p> <p>If a <i>GetCoverage</i> request contains a subsettingCrS and/or outputCrS parameter then this parameter(s) shall be applied individually to each EO Coverage to be returned as specified by the WCS CRS Extension [OGC 11-053r1].</p>
------------------------	--

Example: The following XML fragment shows parts of the first part of a possible **GetEOCoverageSet** operation multipart response:

```
<?xml version="1.0" encoding="UTF-8"?>

7.6.4. GetEOCoverageSet exceptions

Table 14. Exception codes for GetEOCoverageSet operation

exceptionCode value	HTTP code	Meaning of exception code	locator value
NoSuchDatasetSeriesOrCoverage	404	The identifier passed does not match with any of the DatasetSeries or EO Coverages offered by this server	List of violating Dataset Series and/or EO Coverage identifiers

Chapter 8. WCS extensions

8.1. Overview

Requirements class *eowcs* normatively depends on the WCS Extension specifications listed in this Clause. In other words, any implementation claiming to conform to this requirements class must also implement the specifications required in this Clause.

8.2. Band subsetting

Requirement 114	<p>/req/eowcs/band-subsetting</p> <p>Implementations of this EO-WCS shall support the OGC® Web Coverage Service Interface Standard - Range Subsetting Extension [OGC 12-040].</p> <p>Dependency: http://www.opengis.net/spec/WCS_service-extension_range-subsetting/1.0/conf/record-subsetting</p>
------------------------	--

8.3. Scaling

Requirement 115	<p>/req/eowcs/scaling</p> <p>Implementations of this EO-WCS shall support the OGC® Web Coverage Service Interface Standard - Scaling Extension [OGC 12-039].</p> <p>Dependency: http://www.opengis.net/spec/WCS_service-extension_scaling/1.0/conf/scaling</p>
------------------------	---

8.4. Interpolation

Requirement 116	<p>/req/eowcs/interpolation</p> <p>Implementations of this EO-WCS shall support the OGC® Web Coverage Service Interface Standard - Interpolation Extension [OGC 12-049].</p> <p>Dependency: http://www.opengis.net/spec/WCS_service-extension_interpolation/1.0/conf/interpolation</p>
------------------------	---

8.5. CRSs

Requirement 117	/req/eowcs/crs Implementations of this EO-WCS shall support the OGC® Web Coverage Service Interface Standard - CRS Extension [OGC 11-053r1]. Dependency: http://www.opengis.net/spec/WCS_service-extension_crs/1.0/conf/crs , http://www.opengis.net/spec/WCS_service-extension_crs/1.0/conf/crs-gridded-coverage
------------------------	--

8.6. Coverage format encodings

Requirement 118	/req/eowcs/encodings Implementations of this EO-WCS shall support at least one of the coverage format encodings GeoTIFF [OGC 12-100r1], NetCDF [OGC 14-100r2], and JPEG2000 [OGC 12-108]. Dependency: http://www.opengis.net/spec/GMLCOV_geotiff-coverages/1.0/conf/geotiff-coverage , http://www.opengis.net/spec/netCDF_data-model/conf/CF-netCDF-1.6-GML-encoding , http://www.opengis.net/spec/netCDF_data-model/conf/CF-netCDF-1.6-Data-format , http://www.opengis.net/spec/netCDF_data-model/conf/CF-netCDF-1.6-Multipart-encoding , http://www.opengis.net/spec/gmlcov_jpeg2000-coverages/1.0/conf/jpeg2000-coverage
------------------------	---

Chapter 9. Protocol Bindings

9.1. Protocol choices

At least one of the protocols, GET/KVP and SOAP shall be supported by an implementation. This choice is represented in this specification by two separate conformance classes, *eowcs_get-kvp* and *eowcs_soap* defined in the Subclauses below.

Requirement 119	<p>/req/eowcs/protocol-bindings</p> <p>Implementations of this EO-WCS shall support at least one of the requirements classes <i>eowcs_get-kvp</i> and <i>eowcs_soap</i>. Dependency: http://www.opengis.net/spec/WCS_application-profile_earth-observation/1.1/conf/eowcs_get-kvp, http://www.opengis.net/spec/WCS_application-profile_earth-observation/1.1/conf/eowcs_soap</p>
------------------------	---

9.2. GET-KVP protocol conformance class

9.2.1. WCS GET/KVP encoding

Requirement 120	<p>/req/eowcs_get-kvp/mandatory</p> <p>Implementations of this EO-WCS which support the <i>eowcs_get-kvp</i> requirements class shall support the WCS 2.0 protocol extension GET/KVP [OGC 09-147r3]. Dependency: http://www.opengis.net/spec/WCS_protocol-binding_get-kvp/1.0/conf/get-kvp</p>
------------------------	--

Requirement 121	<p>/req/eowcs_get-kvp/conformance-class-in-profile</p> <p>Implementations of this EO-WCS which support the <i>eowcs_get-kvp</i> requirements class shall include the following URI in a Profile element in the ServiceIdentification in a <i>GetCapabilities</i> response: http://www.opengis.net/spec/WCS_application-profile_earth-observation/1.1/conf/eowcs_get-kvp</p>
------------------------	---

9.2.2. DescribeEOCoverageSet GET/KVP encoding

Requirement 122	<p>/req/eowcs_get-kvp/describeEOCoverageSet-request</p> <p>The request parameter of a <i>DescribeEOCoverageSet</i> request shall be indicated as follows: request=DescribeEOCoverageSet</p>
------------------------	--

Requirement 123	/req/eowcs_get-kvp/describeEOCoverageSet-eoid The eoId parameter of a <i>DescribeEOCoverageSet</i> request shall be indicated as follows, for parameter values v_1, \dots, v_n : eoId = v_1, \dots, v_n
Requirement 124	/req/eowcs_get-kvp/describeEOCoverageSet-containment The containment parameter of a <i>DescribeEOCoverageSet</i> request shall be indicated as follows: containment =overlaps or containment =contains
Requirement 125	/req/eowcs_get-kvp/describeEOCoverageSet-count The count parameter of a <i>DescribeEOCoverageSet</i> request shall be indicated as follows, for positive integer value x: count =x
Requirement 126	/req/eowcs_get-kvp/describeEOCoverageSet-startIndex The startIndex parameter of a <i>DescribeEOCoverageSet</i> request shall be indicated as follows, for a non-negative integer value x: startIndex =x
Requirement 127	/req/eowcs_get-kvp/describeEOCoverageSet-subset The trim parameters of a <i>DescribeEOCoverageSet</i> request shall be indicated through a possibly empty set of subset specifications, each one with key " subset " and value specification given by a SubsetSpec adhering to this EBNF syntax [3] and the resp. XML definitions [6]: SubsetSpec : dimension (interval) dimension: <u>long</u> <u>lat</u> <u>phenomenonTime</u> interval: low <u>⌊</u> high low: point <u>*</u> high: point <u>*</u> point: number <u>"</u> token <u>"</u> // <u>"</u> = ASCII 0x42

Syntax follows the HTTP standard [3]: underlined tokens represent literals which appear "as is" ("terminal symbols"), other tokens represent sub- expressions to be substituted ("non-terminals"). A vertical bar ("|") denotes alternatives, items in brackets ("[]") are optional. Non-terminals **NCName**, **number**, **token**, and **anyURI** follow the resp. XML definitions [6].

NOTE

Allowed values for points are determined by the CRS used. This ranges from "2009-11-06" for time to "-41.5" and "41°5'" for lat/long whereby non-numeric values have to be enclosed in double quotes.

NOTE

As per HTTP [3], keys are case insensitive whereas values are case sensitive.

Example: The following KVP-encoded *DescribeEOCoverageSet* request addresses service **path** on server **www.mysevice.org** at port **port** requests coverage **C0002** in the domain specified by the bounding box with longitude (-71,47) and latitude (-66,51), expressed in spatial CRS WGS84-2D and temporal CRS ISO:8601 (which are assumed to be supported for the coverage):

```
http://www.myserver.org:port/path?
service=WCS
&version=2.0.1
&request=DescribeEOCoverageSet
&eoid=C0002
&containment=overlaps
&subset=long(-71,47)
&subset=lat(-66,51)
&subset=phenomenonTime("2009-11-06T23:20:52Z", "2009-11-13T23:20:52Z")
```

9.2.3. *GetEOCoverageSet* GET/KVP encoding

Requirement 128	/req/eowcs_get-kvp/getEOCoverageSet-request The request parameter of a <i>GetEOCoverageSet</i> request shall be indicated as follows: request=GetEOCoverageSet
Requirement 129	/req/eowcs_get-kvp/getEOCoverageSet-eoid The eoid parameter of a <i>GetEOCoverageSet</i> request shall be indicated as follows, for parameter values v_1, \dots, v_n : eoid=v_1, \dots, v_n
Requirement 130	/req/eowcs_get-kvp/getEOCoverageSet-containment The containment parameter of a <i>GetEOCoverageSet</i> request shall be indicated as follows: containment=overlaps or containment=contains
Requirement 131	/req/eowcs_get-kvp/getEOCoverageSet-count The count parameter of a <i>GetEOCoverageSet</i> request shall be indicated as follows, for positive integer value x : count=x
Requirement 132	/req/eowcs_get-kvp/getEOCoverageSet-startIndex The startIndex parameter of a <i>GetEOCoverageSet</i> request shall be indicated as follows, for a non-negative integer value x : startindex=x

Requirement 133	/req/eowcs_get-kvp/getEOCoverageSet-packageFormat The packageFormat parameter of a <i>GetEOCoverageSet</i> request shall be indicated as follows, for parameter value v_1 : packageformat=v_1
Requirement 134	/req/eowcs_get-kvp/getEOCoverageSet-mediaType The mediaType parameter of a <i>GetEOCoverageSet</i> request shall be indicated as follows: mediatype=multipart/related
Requirement 135	/req/eowcs_get-kvp/getEOCoverageSet-format The format parameter of a <i>GetEOCoverageSet</i> request shall be indicated as follows, for parameter value v_1 : format=v_1
Requirement 136	/req/eowcs_get-kvp/getEOCoverageSet-applySubset The applySubset parameter of a <i>GetEOCoverageSet</i> request shall be indicated as follows: applysubset=true or applysubset=false
Requirement 137	/req/eowcs_get-kvp/getEOCoverageSet-parameters The Scaling , Interpolation , subsettingCrs , and outputCrs parameters of a <i>GetEOCoverageSet</i> request shall be indicated as defined in the respective WCS extension.
Requirement 138	/req/eowcs_get-kvp/getEOCoverageSet-subset The trim parameters of a <i>GetEOCoverageSet</i> request shall be indicated through a possibly empty set of subset specifications, each one with key " subset " and value specification given by a SubsetSpec adhering to this EBNF syntax [3] and the resp. XML definitions [6]: SubsetSpec: dimension (interval) dimension: <u>long</u> <u>lat</u> <u>phenomenonTime</u> interval: low <u>⌊</u> high low: point <u>_</u> high: point <u>_</u> point: number <u>_</u> token <u>_</u> <u>//</u> <u>_</u> = ASCII 0x42

Syntax follows the HTTP standard [3]: underlined tokens represent literals which appear "as is" ("terminal symbols"), other tokens represent sub- expressions to be substituted ("non-terminals"). A vertical bar ("|") denotes alternatives, items in brackets ("[" "]") are optional. Non-terminals **NCName**, **number**, **token**, and **anyURI** follow the resp. XML definitions [6].

NOTE	Allowed values for points are determined by the CRS used. This ranges from "2009-11-06" for time to "-41.5" and "41°5'" for lat/long whereby non-numeric values have to be enclosed in double quotes.
NOTE	As per HTTP [3], keys are case insensitive whereas values are case sensitive.

9.3. SOAP protocol conformance class

9.3.1. WCS SOAP encoding

Requirement 139	/req/eowcs_soap/mandatory Implementations of this EO-WCS which support the <i>eowcs_soap</i> requirements class shall support the WCS 2.0 protocol extension SOAP [OGC 09-149r1]. Dependency: http://www.opengis.net/spec/WCS_protocol-binding_soap/1.0/conf/soap
Requirement 140	/req/eowcs_soap/conformance-class-in-profile Implementations of this EO-WCS which support the <i>eowcs_soap</i> requirements class shall include the following URI in a Profile element in the ServiceIdentification in a <i>GetCapabilities</i> response: http://www.opengis.net/spec/WCS_application-profile_earth-observation/1.1/conf/eowcs_soap

9.3.2. DescribeEOCoverageSet SOAP encoding

Requirement 141	/req/eowcs_soap/describeEOCoverageSet-request-structure A <i>DescribeEOCoverageSet</i> request shall contain exactly one Body element containing exactly one DescribeEOCoverageSet element.
Requirement 142	/req/eowcs_soap/describeEOCoverageSet-response-structure In the response to a successful <i>DescribeEOCoverageSet</i> request, the SOAP Envelope shall contain exactly one Body element which contains a EOWCS::EOCoverageSetDescription as its single element.

Example: See files **wcseo_requestDescribeEOCoverageSet.xml** and
wcseo_responseDescribeEOCoverageSet.xml being part of this standard.

9.3.3. DescribeEOCoverageSet WSDL

Requirement 143	/req/eowcs_soap/describeEOCoverageSet-wsdl Publication of a WCS SOAP service endpoint shall use the binding as defined in file <code>wsdl/wcs-soap-binding.wsdl</code> of the EO-WCS package.
------------------------	---

NOTE

A sample service description relying on this binding is provided in file `example-soap-endpoint.wsdl`.

9.3.4. *GetEOCoverageSet* SOAP encoding

Requirement 144	/req/eowcs_soap/getEOCoverageSet-request-structure A <i>GetEOCoverageSet</i> request shall contain exactly one Body element containing exactly one <code>GetEOCoverageSet</code> element.
------------------------	--

Requirement 145	/req/eowcs_soap/getEOCoverageSet-response-structure In the response to a successful <i>GetEOCoverageSet</i> request, the SOAP Envelope shall contain exactly one Body element which contains a <code>EOWCS::EOCoverageSet</code> as its single element.
------------------------	---

Example: See files `wcseo_requestGetEOCoverageSet.xml` and `wcseo_responseGetEOCoverageSet.xml` being part of this standard.

9.3.5. *GetEOCoverageSet* WSDL

Requirement 146	/req/eowcs_soap/getEOCoverageSet-wsdl Publication of a WCS SOAP service endpoint shall use the binding as defined in file <code>wsdl/wcs-soap-binding.wsdl</code> of the EO-WCS package.
------------------------	--

NOTE

A sample service description relying on this binding is provided in file `example-soap-endpoint.wsdl`.

Annex A: Conformance Class Abstract Test Suite (Normative)

A WCS implementation must satisfy the following system characteristics to be conformant with this specification.

Tests identifiers below are relative to: http://www.opengis.net/spec/WCS_application-profile_earth-observation/1.1/

A.1. Conformance Test Classes: eowcs & eowcs_geteocoverageset

The OGC URI identifier of this conformance classes are: http://www.opengis.net/spec/WCS_application-profile_earth-observation/1.1/conf/eowcs http://www.opengis.net/spec/WCS_application-profile_earth-observation/1.1/conf/eowcs_geteocoverageset

A.1.1. EO Metadata

Test id:	/conf/eowcs/eo-metadata-structure
Test purpose:	Requirement 1 /req/eowcs/eo-metadata-structure
Test method:	<p>For each EO Coverage offered by the server under test:</p> <ul style="list-style-type: none">• retrieve coverage information via <i>DescribeCoverage</i>, <i>DescribeEOCoverageSet</i>, and <i>GetCoverage</i> operations.• Check that the responses contain a EOWCS::EOMetadata corresponding to the definition and that all responses contain the same information. <p>Test passes if all individual tests pass.</p>

A.1.2. Footprint in EO Metadata

Test id:	/conf/eowcs/footprint-in-eo-metadata
Test purpose:	Requirement 2 /req/eowcs/footprint-in-eo-metadata
Test method:	<p>For each EO Coverage offered by the server under test:</p> <ul style="list-style-type: none">• retrieve coverage information via <i>DescribeCoverage</i>, <i>DescribeEOCoverageSet</i>, and <i>GetCoverage</i> operations.• Check that the responses contain an eop:EarthObservation/om:featureOfInterest/eop:Footprint element in the EOWCS::EOMetadata and that all responses contain the same information. <p>Test passes if all individual tests pass.</p>

A.1.3. EO Coverage

Test id:	/conf/eowcs/eo-coverage-structure
Test purpose:	Requirement 3 /req/eowcs/eo-coverage-structure
Test method:	<p>For each EO Coverage offered by the server under test:</p> <ul style="list-style-type: none">• retrieve coverage information via <i>GetCoverage</i> operation.• Check that all responses consist of an XML document as defined in the places referenced. <p>Test passes if all individual tests pass.</p>

A.1.4. EO Metadata in EO Coverage

Test id:	/conf/eowcs/eo-metadata-in-eo-coverage
Test purpose:	Requirement 4 /req/eowcs/eo-metadata-in-eo-coverage
Test method:	<p>For each EO Coverage offered by the server under test:</p> <ul style="list-style-type: none">• retrieve coverage information via <i>DescribeCoverage</i>, <i>DescribeEOCoverageSet</i>, and <i>GetCoverage</i> operations.• Check that the responses contain a EOWCS::EOMetadata and that all responses contain the same information. <p>Test passes if all individual tests pass.</p>

A.1.5. EOP Identifier in EO Metadata

Test id:	/conf/eowcs/eop-identifier-in-eo-metadata
Test purpose:	Requirement 5 /req/eowcs/eop-identifier-in-eo-metadata
Test method:	<p>For each EO Coverage offered by the server under test:</p> <ul style="list-style-type: none">• retrieve coverage information via <i>DescribeCoverage</i>, <i>DescribeEOCoverageSet</i>, and <i>GetCoverage</i> operations.• Check that the responses contain an eop:EarthObservation/eop:metadataProperty/eop:EarthObservationMetaData/eop:identifier whose first word is identical to the EO Coverage identifier. <p>Test passes if all individual tests pass.</p>

A.1.6. Footprint inside BoundedBy

Test id:	/conf/eowcs/footprint-inside-boundedBy
Test purpose:	Requirement 6 /req/eowcs/footprint-inside-boundedBy

Test method:	<p>For each EO Coverage offered by the server under test:</p> <ul style="list-style-type: none"> retrieve coverage information via <i>DescribeCoverage</i>, <i>DescribeEOCoverageSet</i>, and <i>GetCoverage</i> operations. Check that all polygons listed in <code>eop:EarthObservation/om:featureOfInterest/eop:Footprint</code> element are contained in the bounding box of the <code>gml:boundedBy</code> element of the <code>gml:Envelope</code>. <p>Test passes if all individual tests pass.</p>
---------------------	--

A.1.7. PhenomenonTime in EO Metadata

Test id:	/conf/eowcs/phenomenonTime-in-eo-metadata
Test purpose:	Requirement 7 /req/eowcs/phenomenonTime-in-eo-metadata
Test method:	<p>For each EO Coverage offered by the server under test:</p> <ul style="list-style-type: none"> retrieve coverage information via <i>DescribeCoverage</i>, <i>DescribeEOCoverageSet</i>, and <i>GetCoverage</i> operations. Check that the responses contain elements <code>eop:EarthObservation/om:phenomenonTime/gml:TimePeriod/gml:beginPosition</code> and <code>eop:EarthObservation/om:phenomenonTime/gml:TimePeriod/gml:endPosition</code> where <code>beginPosition ≤ endPosition</code>. <p>Test passes if all individual tests pass.</p>

A.1.8. PhenomenonTime ISO9891

Test id:	/conf/eowcs/phenomenonTime-iso8601
Test purpose:	Requirement 8 /req/eowcs/phenomenonTime-iso8601
Test method:	<p>For each EO Coverage offered by the server under test:</p> <ul style="list-style-type: none"> retrieve coverage information via <i>DescribeCoverage</i>, <i>DescribeEOCoverageSet</i>, and <i>GetCoverage</i> operations. Check that the temporal validity values are expressed in ISO 8601. <p>Test passes if all individual tests pass.</p>

A.1.9. Range type extension

Test id:	/conf/eowcs/rangeTypeExtension
Test purpose:	Requirement 9 /req/eowcs/rangeTypeExtension

Test method:	TODO
---------------------	------

A.1.10. Range type uom

Test id:	/conf/eowcs/rangeType-uom
Test purpose:	Requirement 10 /req/eowcs/rangeType-uom
Test method:	TODO

A.1.11. Range type name

Test id:	/conf/eowcs/rangeType-name
Test purpose:	Requirement 11 /req/eowcs/rangeType-name
Test method:	TODO

A.1.12. Rangeset of Coverage

Test id:	/conf/eowcs/range-set-of-eo-coverage
Test purpose:	Requirement 12 /req/eowcs/range-set-of-eo-coverage
Test method:	<p>For each EO Coverage offered by the server under test:</p> <ul style="list-style-type: none"> • retrieve coverage information via <i>GetCoverage</i> operation. • Check that all cells, whose locations are outside the EO Metadata footprint when both are evaluated in WGS84, contain some nil value as defined in the bounding EO Coverage's range type. <p>Test passes if all individual tests pass.</p>

A.1.13. Dataset Structure

Test id:	/conf/eowcs/dataset-structure
Test purpose:	Requirement 13 /req/eowcs/dataset-structure
Test method:	<p>For each EO Dataset offered by the server under test:</p> <ul style="list-style-type: none"> • retrieve coverage information via <i>GetCoverage</i> operation. • Check that all responses consist of an XML document as defined in the places referenced. <p>Test passes if all individual tests pass.</p>

A.1.14. Referenceable Stitched Mosaic-structure

Test id:	/conf/eowcs/referenceableStitchedMosaic-structure
Test purpose:	Requirement 14 /req/eowcs/referenceableStitchedMosaic-structure
Test method:	<p>For each EOWCS::ReferenceableStitchedMosaic offered by the server under test:</p> <ul style="list-style-type: none">• retrieve coverage information via <i>GetCoverage</i> operation.• Check that all responses consist of an XML document of type EOWCS::ReferenceableStitchedMosaic as described in the references stated by the requirement. <p>Test passes if all individual tests pass.</p>

A.1.15. Rectified Stitched Mosaic-structure

Test id:	/conf/eowcs/rectifiedStitchedMosaic-structure
Test purpose:	Requirement 15 /req/eowcs/rectifiedStitchedMosaic-structure
Test method:	<p>For each EOWCS::RectifiedStitchedMosaic offered by the server under test:</p> <ul style="list-style-type: none">• retrieve coverage information via <i>GetCoverage</i> operation.• Check that all responses consist of an XML document of type EOWCS::RectifiedStitchedMosaic as described in the references stated by the requirement. <p>Test passes if all individual tests pass.</p>

A.1.16. Composed-of in Stitched mosaic

Test id:	/conf/eowcs/composedOf-in-stitched-mosaic
Test purpose:	Requirement 16 /req/eowcs/composedOf-in-stitched-mosaic

Test method:	<p>For each <code>EOWCS::RectifiedStitchedMosaic</code> and <code>EOWCS::RectifiedStitchedMosaic</code> offered by the server under test:</p> <ul style="list-style-type: none"> Obtain the set of <code>dataset</code> identifiers contained in <code>eop:EarthObservation/eop:metaDataProperty/eop:EarthObservationMetaData/eop:composedOf</code> via <i>DescribeCoverage</i>, <i>DescribeEOCoverageSet</i>, and <i>GetCoverage</i> operations. Check that all responses contain the same identifier information. Obtain the contained set of dataset identifiers of the Stitched Mosaic. Check that all responses contain the same identifier information. If the <code>eop:composedOf</code> element is present then check that the contained set of <code>dataset</code> identifiers in <code>eop:EarthObservation/eop:metaDataProperty/eop:EarthObservationMetaData/eop:composedOf</code> is equal to the set of <code>dataset</code> identifiers of the Stitched Mosaic. <p>Test passes if all individual tests pass.</p>
---------------------	--

A.1.17. Contributing Footprint inside Footprint

Test id:	/conf/eowcs/contributingFootprint-inside-footprint
Test purpose:	Requirement 17 /req/eowcs/contributingFootprint-inside-footprint
Test method:	<p>For each Stitched Mosaic offered by the server under test:</p> <ul style="list-style-type: none"> retrieve coverage information via <i>DescribeCoverage</i>, <i>DescribeEOCoverageSet</i>, and <i>GetCoverage</i> operations. For each obtained <code>dataset d</code>: <ul style="list-style-type: none"> obtain the contributingFootprint associated with the reference to <i>d</i> and check that all responses contain the same contributingFootprint information with the reference to <i>d</i>. obtain the footprint of <i>d</i> coverage via <i>DescribeCoverage</i>, <i>DescribeEOCoverageSet</i>, and <i>GetCoverage</i> operations, and check that all responses contain the same footprint information. Check that the contributingFootprint associated with the reference to <i>d</i> is contained in the footprint of <i>d</i>. <p>Test passes if all individual tests pass.</p>

A.1.18. Contributing Footprint-pairwise-disjoint

Test id:	/conf/eowcs/contributingFootprint-pairwise-disjoint
Test purpose:	Requirement 18 /req/eowcs/contributingFootprint-pairwise-disjoint

Test method:	<p>For each Stitched Mosaic offered by the server under test:</p> <ul style="list-style-type: none"> • retrieve coverage information via <i>DescribeCoverage</i>, <i>DescribeEOCoverageSet</i>, and <i>GetCoverage</i> operations. Check that all responses contain the same contributingFootprint information. • Check that the contributingFootprints are pair-wise disjoint. <p>Test passes if all individual tests pass.</p>
---------------------	--

A.1.19. Contributing Footprint-union-of-footprints

Test id:	/conf/eowcs/contributingFootprint-union-of-footprints
Test purpose:	Requirement 19 /req/eowcs/contributingFootprint-union-of-footprints
Test method:	<p>For each Stitched Mosaic offered by the server under test:</p> <ul style="list-style-type: none"> • retrieve coverage information via <i>DescribeCoverage</i>, <i>DescribeEOCoverageSet</i>, and <i>GetCoverage</i> operations. • Check that there is a contributingFootprint for each dataset of the Stitched Mosaic. <p>Test passes if all individual tests pass.</p>

A.1.20. Dataset Domain Set in Set in Stitched Mosaic Domain Set

Test id:	/conf/eowcs/dataset-domain-set-in-stitched-mosaic-domain-set
Test purpose:	Requirement 20 /req/eowcs/dataset-domain-set-in-stitched-mosaic-domain-set
Test method:	<p>For each Stitched Mosaic offered by the server under test:</p> <ul style="list-style-type: none"> • Obtain all cells of s as defined by domain set of s via <i>GetCoverage</i> operation. • For each obtained dataset d: <ul style="list-style-type: none"> ◦ Obtain all cells of d as defined by domain set of d via <i>GetCoverage</i> operation. ◦ Check that all cells of d as defined by domain set of d are included in the set of all cells of s as defined by domain set of s. <p>Test passes if all individual tests pass.</p>

A.1.21. Datasets in Rectified Stitched Mosaic Same Offset Vector

Test id:	/conf/eowcs/datasets-in-rectifiedSticheMosaic-same-offsetVector
-----------------	---

Test purpose:	Requirement 21 /req/eowcs/datasets-in-rectifiedStitcheMosaic-same-offsetVector
Test method:	<p>For each Rectified Stitched Mosaic offered by the server under test:</p> <ul style="list-style-type: none"> • For each obtained dataset <i>d</i>: <ul style="list-style-type: none"> ◦ retrieve coverage information via <i>DescribeCoverage</i>, <i>DescribeEOCoverageSet</i>, and <i>GetCoverage</i> operations. ◦ Check that all responses contain the same gml:offsetVector information in their domain sets. • Check that all Datasets have identical values in the gml:offsetVector elements of their domain sets. <p>Test passes if all individual tests pass.</p>

A.1.22. Rectified Stitched Mosaic OffsetVector

Test id:	/conf/eowcs/rectifiedStitchedMosaic-offsetVector
Test purpose:	Requirement 22 /req/eowcs/rectifiedStitchedMosaic-offsetVector
Test method:	<p>For each Rectified Stitched Mosaic offered by the server under test:</p> <ul style="list-style-type: none"> • retrieve the value of the gml:offsetVector elements of the domain set via <i>DescribeCoverage</i>, <i>DescribeEOCoverageSet</i>, and <i>GetCoverage</i> operations. • Check that all responses contain the same offsetVector information. • For each obtained dataset <i>d</i>: <ul style="list-style-type: none"> ◦ retrieve coverage information via <i>DescribeCoverage</i>, <i>DescribeEOCoverageSet</i>, and <i>GetCoverage</i> operations. ◦ Check that all responses contain the same gml:offsetVector information in their domain sets. • Check that both the Rectified Stitched Mosaic and the Datasets the Rectified Stitched Mosaic refers to have identical values in the gml:offsetVector elements of their domain sets. <p>Test passes if all individual tests pass.</p>

A.1.23. Referenceable Stitched Mosaic Domainset

Test id:	/conf/eowcs/referenceableStitchedMosaic-domain-set
Test purpose:	Requirement 23 /req/eowcs/referenceableStitchedMosaic-domain-set

Test method:	<p>For each Referenceable Stitched Mosaic offered by the server under test:</p> <ul style="list-style-type: none"> • For any pair d_1 and d_2 of Datasets referred to by the given Stitched Mosaic: <ul style="list-style-type: none"> ◦ Check that the set of point locations in the geographic overlap of the d_1 and d_2 domain set are identical. <p>Test passes if all individual tests pass.</p>
---------------------	---

A.1.24. Temporal Validity Stitched Mosaic

Test id:	/conf/eowcs/temporal-validity-stitched-mosaic
Test purpose:	Requirement 24 /req/eowcs/temporal-validity-stitched-mosaic
Test method:	<p>For each Stitched Mosaic offered by the server under test:</p> <ul style="list-style-type: none"> • retrieve the time interval t of the Stitched Mosaic given by its <code>eop:EarthObservation/om:phenomenonTime/gml:TimePeriod/gml:beginPosition</code> and <code>eop:EarthObservation/om:phenomenonTime/gml:TimePeriod/gml:endPosition</code> elements in <code>wcseo:EOMetadata</code> via <i>DescribeCoverage</i>, <i>DescribeEOCoverageSet</i>, and <i>GetCoverage</i> operations. • Check that all responses contain the same time interval information. For each obtained dataset d: <ul style="list-style-type: none"> ◦ retrieve the time interval t_i of dataset d given by its <code>eop:EarthObservation/om:phenomenonTime/gml:TimePeriod/gml:beginPosition</code> and <code>eop:EarthObservation/om:phenomenonTime/gml:TimePeriod/gml:endPosition</code> elements in <code>wcseo:EOMetadata</code> via <i>DescribeCoverage</i>, <i>DescribeEOCoverageSet</i>, and <i>GetCoverage</i> operations. ◦ Check that all responses contain the same time interval information. • Check that t is the minimal time interval containing the temporal validities of all Datasets the Stitched Mosaic refers to. <p>Test passes if all individual tests pass.</p>

A.1.25. Datasets in Stitched Mosaic Same Rangenotype

Test id:	/conf/eowcs/datasets-in-stitched-mosaic-same-range-type
Test purpose:	Requirement 25 /req/eowcs/datasets-in-stitched-mosaic-same-range-type

Test method:	<p>For each Stitched Mosaic offered by the server under test:</p> <ul style="list-style-type: none"> • Obtain range type via <i>DescribeCoverage</i>, <i>DescribeEOCoverageSet</i>, and <i>GetCoverage</i> operations. Check that all responses contain the same range type information s. • For each obtained dataset: <ul style="list-style-type: none"> ◦ Obtain range type via <i>DescribeCoverage</i>, <i>DescribeEOCoverageSet</i>, and <i>GetCoverage</i> operations. ◦ Check that all responses contain the same range type d, and check that d is identical to the range type of s. <p>Test passes if all individual tests pass.</p>
---------------------	--

A.1.26. Nil Values in Stitched Mosaic

Test id:	/conf/eowcs/nil-values-in-stitched-mosaic
Test purpose:	Requirement 26 /req/eowcs/nil-values-in-stitched-mosaic
Test method:	<p>For each Stitched Mosaic offered by the server under test:</p> <ul style="list-style-type: none"> • Obtain the domain set via <i>DescribeCoverage</i>, <i>DescribeEOCoverageSet</i>, and <i>GetCoverage</i> operations. • Check that all responses contain the same domain set information. • Check that if the domain set contains locations which are not inside any contributingFootprint the Stitched Mosaic refers to then the nil value set of that Stitched Mosaic are not empty. <p>Test passes if all individual tests pass.</p>

A.1.27. Range Values of Stitched Mosaic

Test id:	/conf/eowcs/range-values-of-stitched-mosaic
Test purpose:	Requirement 27 /req/eowcs/range-values-of-stitched-mosaic

Test method:	<p>For each Stitched Mosaic offered by the server under test:</p> <ul style="list-style-type: none"> • Obtain the contained cells via <i>GetCoverage</i> operation. • For each obtained cell with location p check that: <ul style="list-style-type: none"> ◦ if p is located within the <i>contributingFootprint</i> of some Dataset d referred to by s then it is the range value of d at p; ◦ if p is not located within the <i>contributingFootprint</i> of any Dataset d referred to by s then it is one of the range values contained in the nil value set of s. <p>Test passes if all individual tests pass.</p>
---------------------	--

A.1.28. Dataset Series Structure

Test id:	/conf/eowcs/datasetSeries-structure
Test purpose:	Requirement 28 /req/eowcs/datasetSeries-structure
Test method:	<p>For each EOWCS::DatasetSeries offered by the server under test:</p> <ul style="list-style-type: none"> • Obtain the EOWCS::DatasetSeries via <i>DescribeEOCoverageSet</i>. Check that all responses consist of an XML document as defined in the places referenced. <p>Test passes if all individual tests pass.</p>

A.1.29. Footprint in Dataset Series

Test id:	/conf/eowcs/footprint-in-datasetSeries
Test purpose:	Requirement 29 /req/eowcs/footprint-in-datasetSeries
Test method:	<p>For each EOWCS::DatasetSeries offered by the server under test:</p> <ul style="list-style-type: none"> • Obtain the footprint of EOWCS::DatasetSeries via <i>DescribeEOCoverageSet</i>. • Check that the locations of the footprint are expressed in WGS84. • Obtain the footprints of all Stitched Mosaics and Datasets the Dataset Series refers to. • Check that these footprints are enclosed in the footprint of EOWCS::DatasetSeries. <p>Test passes if all individual tests pass.</p>

A.1.30. TimePeriod in DatasetSeries

Test id:	/conf/eowcs/timePeriod-in-datasetSeries
Test purpose:	Requirement 30 /req/eowcs/timePeriod-in-datasetSeries

Test method:	<p>For each EOWCS::DatasetSeries offered by the server under test:</p> <ul style="list-style-type: none"> • Obtain the timePeriod element <i>s</i> of EOWCS::DatasetSeries via <i>DescribeEOCoverageSet</i>. Check that <i>s</i> is expressed in ISO 8601 and that: • For each Stitched Mosaics and Datasets the Dataset Series refers to: <ul style="list-style-type: none"> ◦ retrieve the time interval <i>d</i> via <i>DescribeCoverage</i>, <i>DescribeEOCoverageSet</i>, and <i>GetCoverage</i> operations. Check that all responses contain the same time interval information. ◦ Check that <i>d</i> is enclosed by the temporal validities of <i>s</i>. <p>Test passes if all individual tests pass.</p>
---------------------	---

A.1.31. Metadata in DatasetSeries

Test id:	/conf/eowcs/metadata-in-datasetSeries
Test purpose:	Requirement 31 /req/eowcs/metadata-in-datasetSeries
Test method:	TODO

A.1.32. No circular references of Dataset Series

Test id:	/conf/eowcs/nocircularreference-of-datasetSeries
Test purpose:	Requirement 32 /req/eowcs/nocircularreference-of-datasetSeries
Test method:	<p>For each EOWCS::DatasetSeries offered by the server under test:</p> <ul style="list-style-type: none"> • Obtain the EOWCS::DatasetSeries via <i>DescribeEOCoverageSet</i>. Check that all EOWCS::DatasetSeries it refers to do not refer to the EOWCS::DatasetSeries at hand. <p>Test passes if all individual tests pass.</p>

A.1.33. GetCapabilities Request Sections

Test id:	/conf/eowcs/getCapabilities-request-sections
Test purpose:	Requirement 33 /req/eowcs/getCapabilities-request-sections
Test method:	<p>Send a valid <i>GetCapabilities</i> request contains a sections element and this element contains section elements with the values defined in OWS Common, or "DatasetSeriesSummary", or "CoverageSummary" to the server under test, check the result consists of an XML document of type Capabilities and the appropriate components, as defined in the places referenced.</p>

A.1.34. GetCapabilities Response *eowcs* Conformance Class in Profile

Test id:	/conf/eowcs/getCapabilities-response-conformance-class-in-profile
Test purpose:	Requirement 34 /req/eowcs/getCapabilities-response-conformance-class-in-profile
Test method:	Determine the list of supported extensions via a valid <i>GetCapabilities</i> request; check that the extension required is listed.

A.1.35. GetCapabilities Response *eowcs_geteocoverageset* Conformance Class in Profile

Test id:	/conf/eowcs_geteocoverageset/getCapabilities-response-conformance-class-in-profile
Test purpose:	Requirement 35 /req/eowcs_geteocoverageset/getCapabilities-response-conformance-class-in-profile
Test method:	Determine the list of supported extensions via a valid <i>GetCapabilities</i> request; check that the extension required is listed.

A.1.36. GetCapabilities Response Structure

Test id:	/conf/eowcs/getCapabilities-response-structure
Test purpose:	Requirement 36 /req/eowcs/getCapabilities-response-structure
Test method:	Send a valid <i>GetCapabilities</i> request to the server under test, check the result consists of an XML document of type Capabilities and the appropriate components, as defined in the places referenced.

A.1.37. GetCapabilities Response DatasetSeriesSummary

Test id:	/conf/eowcs/getCapabilities-response-datasetSeriesSummary
Test purpose:	Requirement 37 /req/eowcs/getCapabilities-response-datasetSeriesSummary
Test method:	Send a valid <i>GetCapabilities</i> request to the service under test. If a EOWCS::DatasetSeriesSummary section is contained in the response then send, for each DatasetSeriesId , a valid <i>DescribeEOCoverageSet</i> request. Check that none of these requests results in an exception. Test passes if all checks are successful.

A.1.38. GetCapabilities Response DatasetSeriesSummary no-duplicates

Test id:	/conf/eowcs/getCapabilities-response-datasetSeriesSummary-no-duplicates
Test purpose:	Requirement 38 /req/eowcs/getCapabilities-response-datasetSeriesSummary-no-duplicates

Test method:	Send a valid <i>GetCapabilities</i> request to the service under test. If a EOWCS::DatasetSeriesSummary section is contained in the response check that it does not contain any duplicate Dataset Series identifier.
---------------------	---

A.1.39. GetCapabilities Response Coverage Summary

Test id:	/conf/eowcs/getCapabilities-response-coverageSummary
Test purpose:	Requirement 39 /req/eowcs/getCapabilities-response-coverageSummary
Test method:	Send a valid <i>GetCapabilities</i> request to the service under test. If a WCS::CoverageSummary section is contained in the response then send, for each coverage identifier, a valid <i>DescribeCoverage</i> and a valid <i>DescribeEOCoverageSet</i> request. Check that none of these requests results in an exception. Test passes if all individual tests pass.

A.1.40. GetCapabilities Response Coverage Summary Section

Test id:	/conf/eowcs/getCapabilities-response-coverageSummary-section
Test purpose:	Requirement 40 /req/eowcs/getCapabilities-response-coverageSummary-section
Test method:	Send valid <i>GetCapabilities</i> requests contains a sections parameter and the section parameter list contains one of the values "CoverageSummary", "Contents", or "All" to the service under test. Check that the response contains wcs:CoverageSummary elements. Test passes if all individual tests pass.

A.1.41. GetCapabilities Response DatasetSeries Summary Section

Test id:	/conf/eowcs/getCapabilities-response-datasetSeriesSummary-section
Test purpose:	Requirement 41 /req/eowcs/getCapabilities-response-datasetSeriesSummary-section
Test method:	Send valid <i>GetCapabilities</i> requests contains a sections parameter and the section parameter list contains one of the values "DatasetSeriesSummary" or "All" to the service under test. Check that the response contains a wcseo:DatasetSeriesSummary . Test passes if all individual tests pass.

A.1.42. GetCapabilities Response Coverage Subtype

Test id:	/conf/eowcs/getCapabilities-response-coverageSubtype
Test purpose:	Requirement 42 /req/eowcs/getCapabilities-response-coverageSubtype

Test method:	Send a valid <i>GetCapabilities</i> request to the server under test, check that each EO Coverage listed contains the corresponding value in its <i>WCS::CoverageSubtype</i> element.
---------------------	---

A.1.43. GetCapabilities Response countDefault

Test id:	/conf/eowcs/getCapabilities-response-countDefault
Test purpose:	Requirement 43 /req/eowcs/getCapabilities-response-countDefault
Test method:	Send a valid <i>GetCapabilities</i> request to the server under test, check that its <i>ows:OperationsMetadata</i> element contains an <i>ows:Constraint</i> element, as defined in the places referenced.

A.1.44. GetCapabilities Response pagingSupported

Test id:	/conf/eowcs/getCapabilities-response-paging-supported
Test purpose:	Requirement 44 /req/eowcs/getCapabilities-response-paging-supported
Test method:	TODO

A.1.45. GetCapabilities Response wcseoMetadata

Test id:	/conf/eowcs_geteocoverageset/getCapabilities-response-wcseoMetadata
Test purpose:	Requirement 45 /req/eowcs_geteocoverageset/getCapabilities-response-wcseoMetadata
Test method:	TODO

A.1.46. DescribeEOCoverageSet Response defaultPackageFormat

Test id:	/conf/eowcs_geteocoverageset/getCapabilities-response-defaultPackageFormat
Test purpose:	Requirement 46 /req/eowcs_geteocoverageset/getCapabilities-response-defaultPackageFormat
Test method:	TODO

A.1.47. GetCapabilities Response packageFormatSupported

Test id:	/conf/eowcs_geteocoverageset/getCapabilities-response-packageFormatSupported
Test purpose:	Requirement 47 /req/eowcs_geteocoverageset/getCapabilities-response-packageFormatSupported
Test method:	TODO

A.1.48. Describe Coverage Response EO Metadata

Test id:	/conf/eowcs/describeCoverage-response-eo-metadata
Test purpose:	Requirement 48 /req/eowcs/describeCoverage-response-eo-metadata
Test method:	For each EO Coverage offered by the server, send a valid <i>DescribeCoverage</i> request to server under test. Check that the result contains an EOMetadata element. Test passes if all individual tests pass.

A.1.49. Describe Coverage Response Coverage Subtype

Test id:	/conf/eowcs/describeCoverage-response-coverageSubtype
Test purpose:	Requirement 49 /req/eowcs/describeCoverage-response-coverageSubtype
Test method:	Send a valid <i>DescribeCoverage</i> request to the server under test, check that each EO Coverage listed contains the corresponding value in its WCS::CoverageSubtype element.

A.1.50. GetCoverage Request no Slicing

Test id:	/conf/eowcs/getCoverage-request-no-slicing
Test purpose:	Requirement 50 /req/eowcs/getCoverage-request-no-slicing
Test method:	<p>For each EO Coverage offered by the server:</p> <ul style="list-style-type: none">• send otherwise <i>GetCoverage</i> requests with and without a slicing operation.• Check whether appropriate valid results or exceptions, resp., are delivered. <p>Test passes if all individual tests pass.</p>

A.1.51. GetCoverage Response Coverage Type

Test id:	/conf/eowcs/getCoverage-response-coverage-type
Test purpose:	Requirement 51 /req/eowcs/getCoverage-response-coverage-type
Test method:	<p>For each Rectified EO Coverage offered by the server:</p> <ul style="list-style-type: none">• send a valid <i>GetCoverage</i> request to server under test.• Check that the result is Coverage of correct type. <p>Test passes if all individual tests pass.</p>

A.1.52. GetCoverage Response EO Metadata

Test id:	/conf/eowcs/getCoverage-response-eo-metadata
Test purpose:	Requirement 52 /req/eowcs/getCoverage-response-eo-metadata
Test method:	<p>For each EO Coverage offered by the server:</p> <ul style="list-style-type: none">• send a valid <i>GetCoverage</i> request to server under test.• Check that the responses contain a EOWCS::EOMetadata. <p>Test passes if all individual tests pass.</p>

A.1.53. GetCoverage Response EO Metadata in Stitched Mosaic

Test id:	/conf/eowcs/getCoverage-response-eo-metadata-in-stitched-mosaic
Test purpose:	Requirement 53 /req/eowcs/getCoverage-response-eo-metadata-in-stitched-mosaic
Test method:	<p>For each Stitched Mosaic offered by the server:</p> <ul style="list-style-type: none">• send a valid <i>GetCoverage</i> request with an effective spatio-temporal request trim interval to server under test.• Check that the EOWCS::EOMetadata of the coverage returned contains the original Stitched Mosaic's references to those Datasets which have a non-empty intersection with the effective spatio-temporal request trim interval. <p>Test passes if all individual tests pass.</p>

A.1.54. GetCoverage Response Footprint in EO Metadata

Test id:	/conf/eowcs/getCoverage-response-footprint-in-eo-metadata
Test purpose:	Requirement 54 /req/eowcs/getCoverage-response-footprint-in-eo-metadata
Test method:	<p>For each EO Coverage offered by the server:</p> <ul style="list-style-type: none">• Send a valid <i>GetCoverage</i> request with a spatial request trim interval to server under test. Check that the footprint of the EOWCS::EOMetadata in the coverage returned is given by the intersection of the spatial request interval and the footprint of the coverage requested.• Send a valid <i>GetCoverage</i> request without a trimming interval to server under test. Check that the footprint in the result coverage is given by the footprint of the coverage requested. <p>Test passes if all individual tests pass.</p>

A.1.55. GetCoverage Response Lineage in EO Metadata

Test id:	/conf/eowcs/getCoverage-response-lineage-in-eo-metadata
Test purpose:	Requirement 55 /req/eowcs/getCoverage-response-lineage-in-eo-metadata
Test method:	<p>For each EO Coverage offered by the server under test:</p> <ul style="list-style-type: none">• retrieve Lineage component information via <i>DescribeCoverage</i>, <i>DescribeEOCoverageSet</i>, and <i>GetCoverage</i> operations. Check that all responses contain the same information.• Send a valid <i>GetCoverage</i> request to server under test. Check that the Lineage component consists of the Lineage component of the coverage requested with one record appended containing the complete, verbatim <i>GetCoverage</i> request leading to this response. <p>Test passes if all individual tests pass.</p>

A.1.56. DescribeEOCoverageSet Request Structure

Test id:	/conf/eowcs/describeEOCoverageSet-request-structure
Test purpose:	Requirement 56 /req/eowcs/describeEOCoverageSet-request-structure
Test method:	<p>Send <i>DescribeEOCoverageSet</i> requests with valid and invalid request structure.</p> <p>Pass test if appropriate valid results or exceptions, resp., are delivered.</p>

A.1.57. DescribeEOCoverageSet Request Sections

Test id:	/conf/eowcs/describeEOCoverageSet-request-sections
Test purpose:	Requirement 57 /req/eowcs/describeEOCoverageSet-request-sections
Test method:	<p>Send otherwise valid <i>DescribeEOCoverageSet</i> requests containing a sections element and this element containing one of the values:</p> <ul style="list-style-type: none">• "CoverageDescription"• "DatasetSeriesDescriptions"• "All"• invalid values <p>Pass test if appropriate valid results or exceptions, resp., are delivered.</p>

A.1.58. DescribeEOCoverageSet Request eolId

Test id:	/conf/eowcs/describeEOCoverageSet-request-eolId
-----------------	---

Test purpose:	Requirement 58 /req/eowcs/describeEOCoverageSet-request-eoId
Test method:	For each Dataset, Stitched Mosaic, and Dataset Series offered by the server under test, sends a valid <i>DescribeEOCoverageSet</i> request to server under test. Check that the identifier of a Dataset, a Stitched Mosaic, or a Dataset Series is equal to the eoId parameter value in the request. Test passes if all individual tests pass.

A.1.59. DescribeEOCoverageSet Request Containment

Test id:	/conf/eowcs/describeEOCoverageSet-request-containment
Test purpose:	Requirement 59 /req/eowcs/describeEOCoverageSet-request-containment
Test method:	<p>Send otherwise valid <i>DescribeEOCoverageSet</i> requests contain a containment parameter and this parameter has one of the values:</p> <ul style="list-style-type: none"> • "contains" • "overlaps" • invalid values <p>Pass test if appropriate valid results or exceptions, resp., are delivered.</p>

A.1.60. DescribeEOCoverageSet Request Dimension

Test id:	/conf/eowcs/describeEOCoverageSet-request-dimensions
Test purpose:	Requirement 60 /req/eowcs/describeEOCoverageSet-request-dimensions
Test method:	Send otherwise valid <i>DescribeEOCoverageSet</i> requests to server under test which contain duplicate, and send requests which contain no duplicate dimension parameters. Do so for requests with single, and multiple dimensionTrim . Verify that, whenever at least one duplicate dimension occurs, an exception is returned and a normal response otherwise.

A.1.61. DescribeEOCoverageSet Request CRS

Test id:	/conf/eowcs/describeEOCoverageSet-request-crs
Test purpose:	Requirement 61 /req/eowcs/describeEOCoverageSet-request-crs

Test method:	<p>Send otherwise valid <i>DescribeEOCoverageSet</i> requests to server under test which contain:</p> <ul style="list-style-type: none"> • WGS84 [4] as spatial and ISO8601 [2] as temporal CRS for the coordinates in trim request • Other CRS for the coordinates in trim requests <p>Pass test if appropriate valid results or exceptions, resp., are delivered.</p>
---------------------	---

A.1.62. DescribeEOCoverageSet Response Structure

Test id:	/conf/eowcs/describeEOCoverageSet-response-structure
Test purpose:	Requirement 62 /req/eowcs/describeEOCoverageSet-response-structure
Test method:	Send a valid <i>DescribeEOCoverageSet</i> request to the server under test, check that the result consist of a EOWCS::EOCoverageSetDescription structure.

A.1.63. DescribeEOCoverageSet Response EO Metadata

Test id:	/conf/eowcs/describeEOCoverageSet-response-eo-metadata
Test purpose:	Requirement 63 /req/eowcs/describeEOCoverageSet-response-eo-metadata
Test method:	Send a valid <i>DescribeEOCoverageSet</i> requests to server under test, check that each WCS::CoverageDescription listed in the response contains one EOWCS::EOMetadata element and this element contains the EO Metadata component of the EO Coverage to be described.

A.1.64. DescribeEOCoverageSet Response EO Section CoverageDescriptions

Test id:	/conf/eowcs/describeEOCoverageSet-response-section-coverageDescriptions
Test purpose:	Requirement 64 /req/eowcs/describeEOCoverageSet-response-section-coverageDescriptions
Test method:	<p>Send otherwise valid <i>DescribeEOCoverageSet</i> requests contain a sections element and this element contains one of the section parameter values:</p> <ul style="list-style-type: none"> • "CoverageDescription" • "All" • invalid values <p>Pass test if appropriate valid results or exceptions, resp., are delivered.</p>

A.1.65. DescribeEOCoverageSet Response EO Section DatasetSeriesDescriptions

Test id:	/conf/eowcs/describeEOCoverageSet-response-section-datasetSeriesDescriptions
Test purpose:	Requirement 65 /req/eowcs/describeEOCoverageSet-response-section-datasetSeriesDescriptions
Test method:	<p>Send otherwise valid <i>DescribeEOCoverageSet</i> requests contain a sections element and this element contains one of the section parameter values:</p> <ul style="list-style-type: none"> • "DatasetSeriesDescriptions" • "All" • invalid values <p>Pass test if appropriate valid results or exceptions, resp., are delivered.</p>

A.1.66. DescribeEOCoverageSet Response eoId

Test id:	/conf/eowcs/describeEOCoverageSet-response-eoId
Test purpose:	Requirement 66 /req/eowcs/describeEOCoverageSet-response-eoId
Test method:	<p>Send a valid <i>DescribeEOCoverageSet</i> request containing a wcs:CoverageDescription section to server under test. Check that each EO Coverage referred to by one of the objects identified in the eoId request parameter appears at most once.</p>

A.1.67. DescribeEOCoverageSet Response Referred

Test id:	/conf/eowcs/describeEOCoverageSet-response-referred
Test purpose:	Requirement 67 /req/eowcs/describeEOCoverageSet-response-referred
Test method:	<p>For each send a valid <i>DescribeEOCoverageSet</i> requests to server under test, check that each WCS::CoverageDescription listed in the response is at least contained in one of the EOWCS::EOMetadata elements and that this element contains the EO Metadata component of the EO Coverage to be described.</p> <p>For each EOWCS::DatasetSeries offered by the server under test:</p> <ul style="list-style-type: none"> • Send a valid <i>DescribeEOCoverageSet</i> request. Check that each WCS::CoverageDescription listed in the response is at least referred to by one EOWCS::DatasetSeries also contained in the response. <p>Test passes if all individual tests pass.</p>

A.1.68. DescribeEOCoverageSet Response Containment

Test id:	/conf/eowcs/describeEOCoverageSet-response-containment
Test purpose:	Requirement 68 /req/eowcs/describeEOCoverageSet-response-containment
Test method:	<p>Send otherwise valid <i>DescribeEOCoverageSet</i> requests containing a wcs:CoverageDescription section and a spatial trim to server under test. Check that:</p> <ul style="list-style-type: none">• if the request parameter containment is of value overlaps or is omitted, the response contains only descriptions of those EO Coverages whose spatial footprint defined by its eop:EarthObservation/om:featureOfInterest/eop:Footprint overlaps with the spatial request extent;• if the request parameter containment is of value contains, the response contains only descriptions of those EO Coverages whose spatial footprint defined by its eop:EarthObservation/om:featureOfInterest/eop:Footprint is completely contained within the spatial request extent. <p>Pass test if both checks succeed.</p>

A.1.69. DescribeEOCoverageSet Response PhenomenonTime

Test id:	/conf/eowcs/describeEOCoverageSet-response-phenomenonTime
Test purpose:	Requirement 69 /req/eowcs/describeEOCoverageSet-response-phenomenonTime

Test method:	<p>Send otherwise valid <i>DescribeEOCoverageSet</i> requests containing a wcs:CoverageDescription section and a time interval to server under test. Check that:</p> <ul style="list-style-type: none"> • if the request parameter containment is of value overlaps or is omitted, the response contains only descriptions of EO Coverages whose time interval defined by its eop:EarthObservation/om:phenomenonTime/gml:TimePeriod/gml:beginPosition and eop:EarthObservation/om:phenomenonTime/gml:TimePeriod/gml:endPosition elements in wcseo:EOMetadata overlaps with the request time extent; • if request parameter containment is of value contains, the response contains only descriptions of EO Coverages whose time interval defined by its eop:EarthObservation/om:phenomenonTime/gml:TimePeriod/gml:beginPosition and eop:EarthObservation/om:phenomenonTime/gml:TimePeriod/gml:endPosition elements in wcseo:EOMetadata is completely contained within the request time extent; <p>Pass test if both checks succeed.</p>
---------------------	--

A.1.70. DescribeEOCoverageSet Response Trim Omitted

Test id:	/conf/eowcs/describeEOCoverageSet-response-trim-omitted
Test purpose:	Requirement 70 /req/eowcs/describeEOCoverageSet-response-trim-omitted
Test method:	Send otherwise valid <i>DescribeEOCoverageSet</i> requests with a trimming in actual boundary of the object and without a trimming to server under test. Check that both responses are not exceptions and equal.

A.1.71. DescribeEOCoverageSet Response Bound Omitted

Test id:	/conf/eowcs/describeEOCoverageSet-response-bound-omitted
Test purpose:	Requirement 71 /req/eowcs/describeEOCoverageSet-response-bound-omitted
Test method:	Send otherwise valid <i>DescribeEOCoverageSet</i> requests with a lower or upper bound omitted to server under test. Check that the responses are the same when they are indicated in actual lower or upper bound of the objects.

A.1.72. DescribeEOCoverageSet Response CoverageSubtype

Test id:	/conf/eowcs/describeEOCoverageSet-response-coverageSubtype
Test purpose:	Requirement 72 /req/eowcs/describeEOCoverageSet-response-coverageSubtype

Test method:	Send a valid <i>DescribeEOCoverageSet</i> request to server under test. Check that each Coverage listed contains the corresponding value in its <i>WCS::CoverageSubtype</i> element.
---------------------	--

A.1.73. DescribeEOCoverageSet Response Count

Test id:	/conf/eowcs/describeEOCoverageSet-response-count
Test purpose:	Requirement 73 /req/eowcs/describeEOCoverageSet-response-count
Test method:	Send a valid <i>DescribeEOCoverageSet</i> request containing a <i>count</i> parameter with a value lower than the value of the <i>CountDefault</i> element to server under test. Check that the sum of the numbers of <i>CoverageDescription</i> and <i>DatasetSeriesDescription</i> elements is less or equal to the value of the <i>count</i> parameter.

A.1.74. DescribeEOCoverageSet Response startIndex

Test id:	/conf/eowcs/describeEOCoverageSet-response-startIndex
Test purpose:	Requirement 74 /req/eowcs/describeEOCoverageSet-response-startIndex
Test method:	TODO

A.1.75. DescribeEOCoverageSet Response numberMatched attribute

Test id:	/conf/eowcs/describeEOCoverageSet-response-numberMatched
Test purpose:	Requirement 75 /req/eowcs/describeEOCoverageSet-response-numberMatched
Test method:	Send a valid <i>DescribeEOCoverageSet</i> request containing a <i>count</i> parameter with a value lower than the value of the <i>CountDefault</i> element to server under test. Check that the sum of the numbers of <i>CoverageDescription</i> and <i>DatasetSeriesDescription</i> elements is higher or equal to the value of the reported <i>numberMatched</i> parameter.

A.1.76. DescribeEOCoverageSet Response numberReturned attribute

Test id:	/conf/eowcs/describeEOCoverageSet-response-numberReturned
Test purpose:	Requirement 76 /req/eowcs/describeEOCoverageSet-response-numberReturned
Test method:	Send a valid <i>DescribeEOCoverageSet</i> request containing a <i>count</i> parameter with a value lower than the value of the <i>CountDefault</i> element to server under test. Check that the sum of the numbers of <i>CoverageDescription</i> and <i>DatasetSeriesDescription</i> elements is equal to the value of the reported <i>numberReturned</i> parameter.

A.1.77. DescribeEOCoverageSet Response startIndex attribute

Test id:	/conf/eowcs/describeEOCoverageSet-response-startIndex-attr
Test purpose:	Requirement 77 /req/eowcs/describeEOCoverageSet-response-startIndex-attr
Test method:	TODO

A.1.78. DescribeEOCoverageSet Response next attribute

Test id:	/conf/eowcs/describeEOCoverageSet-response-next
Test purpose:	Requirement 78 /req/eowcs/describeEOCoverageSet-response-next
Test method:	TODO

A.1.79. DescribeEOCoverageSet Response previous attribute

Test id:	/conf/eowcs/describeEOCoverageSet-response-previous
Test purpose:	Requirement 79 /req/eowcs/describeEOCoverageSet-response-previous
Test method:	TODO

A.1.80. GetEOCoverageSet Request Structure

Test id:	/conf/eowcs_geteocoverageset/getEOCoverageSet-request-structure
Test purpose:	Requirement 80 /req/eowcs_geteocoverageset/getEOCoverageSet-request-structure
Test method:	TODO

A.1.81. GetEOCoverageSet Request eolId

Test id:	/conf/eowcs_geteocoverageset/getEOCoverageSet-request-eolId
Test purpose:	Requirement 81 /req/eowcs_geteocoverageset/getEOCoverageSet-request-eolId
Test method:	TODO

A.1.82. GetEOCoverageSet Request Containment

Test id:	/conf/eowcs_geteocoverageset/getEOCoverageSet-request-containment
Test purpose:	Requirement 82 /req/eowcs_geteocoverageset/getEOCoverageSet-request-containment
Test method:	TODO

A.1.83. GetEOCoverageSet Request Dimensions

Test id:	/conf/eowcs_geteocoverageset/getEOCoverageSet-request-dimensions
Test purpose:	Requirement 83 /req/eowcs_geteocoverageset/getEOCoverageSet-request-dimensions
Test method:	TODO

A.1.84. GetEOCoverageSet Request CRS

Test id:	/conf/eowcs_geteocoverageset/getEOCoverageSet-request-crs
Test purpose:	Requirement 84 /req/eowcs_geteocoverageset/getEOCoverageSet-request-crs
Test method:	TODO

A.1.85. GetEOCoverageSet Request packageFormat

Test id:	/conf/eowcs_geteocoverageset/getEOCoverageSet-acceptable-packageFormat
Test purpose:	Requirement 85 /req/eowcs_geteocoverageset/getEOCoverageSet-acceptable-packageFormat
Test method:	TODO

A.1.86. GetEOCoverageSet Request mediaType

Test id:	/conf/eowcs_geteocoverageset/getEOCoverageSet-acceptable-mediaType
Test purpose:	Requirement 86 /req/eowcs_geteocoverageset/getEOCoverageSet-acceptable-mediaType
Test method:	TODO

A.1.87. GetEOCoverageSet Request Format

Test id:	/conf/eowcs_geteocoverageset/getEOCoverageSet-acceptable-format
Test purpose:	Requirement 87 /req/eowcs_geteocoverageset/getEOCoverageSet-acceptable-format
Test method:	TODO

A.1.88. GetEOCoverageSet Request Scaling

Test id:	/conf/eowcs_geteocoverageset/getEOCoverageSet-acceptable-scaling
Test purpose:	Requirement 88 /req/eowcs_geteocoverageset/getEOCoverageSet-acceptable-scaling

Test method:	TODO
---------------------	------

A.1.89. GetEOCoverageSet Request Interpolation

Test id:	/conf/eowcs_geteocoverageset/getEOCoverageSet-acceptable-interpolation
Test purpose:	Requirement 89 /req/eowcs_geteocoverageset/getEOCoverageSet-acceptable-interpolation
Test method:	TODO

A.1.90. GetEOCoverageSet Request CRSs

Test id:	/conf/eowcs_geteocoverageset/getEOCoverageSet-acceptable-crss
Test purpose:	Requirement 90 /req/eowcs_geteocoverageset/getEOCoverageSet-acceptable-crss
Test method:	TODO

A.1.91. GetEOCoverageSet Response packageFormat

Test id:	/conf/eowcs_geteocoverageset/getEOCoverageSet-packageFormat
Test purpose:	Requirement 91 /req/eowcs_geteocoverageset/getEOCoverageSet-packageFormat
Test method:	TODO

A.1.92. GetEOCoverageSet Response multipart

Test id:	/conf/eowcs_geteocoverageset/getEOCoverageSet-multipart
Test purpose:	Requirement 92 /req/eowcs_geteocoverageset/getEOCoverageSet-multipart
Test method:	TODO

A.1.93. GetEOCoverageSet Response mediaType

Test id:	/conf/eowcs_geteocoverageset/getEOCoverageSet-mediaType
Test purpose:	Requirement 93 /req/eowcs_geteocoverageset/getEOCoverageSet-mediaType
Test method:	TODO

A.1.94. GetEOCoverageSet Response cid

Test id:	/conf/eowcs_geteocoverageset/getEOCoverageSet-cid
-----------------	---

Test purpose:	Requirement 94 /req/eowcs_geteocoverageset/getEOCoverageSet-cid
Test method:	TODO

A.1.95. GetEOCoverageSet Response Format

Test id:	/conf/eowcs_geteocoverageset/getEOCoverageSet-format
Test purpose:	Requirement 95 /req/eowcs_geteocoverageset/getEOCoverageSet-format
Test method:	TODO

A.1.96. GetEOCoverageSet Response GetCoverage Applicable

Test id:	/conf/eowcs_geteocoverageset/getEOCoverageSet-getCoverage
Test purpose:	Requirement 96 /req/eowcs_geteocoverageset/getEOCoverageSet-getCoverage
Test method:	TODO

A.1.97. GetEOCoverageSet Response eoId

Test id:	/conf/eowcs/getEOCoverageSet-response-eoId
Test purpose:	Requirement 97 /req/eowcs/getEOCoverageSet-response-eoId
Test method:	TODO

A.1.98. GetEOCoverageSet Response Referred

Test id:	/conf/eowcs/getEOCoverageSet-response-referred
Test purpose:	Requirement 98 /req/eowcs/getEOCoverageSet-response-referred
Test method:	TODO

A.1.99. GetEOCoverageSet Response Containment

Test id:	/conf/eowcs/getEOCoverageSet-response-containment
Test purpose:	Requirement 99 /req/eowcs/getEOCoverageSet-response-containment
Test method:	TODO

A.1.100. GetEOCoverageSet Response phenomenonTime

Test id:	/conf/eowcs/getEOCoverageSet-response-phenomenonTime
Test purpose:	Requirement 100 /req/eowcs/getEOCoverageSet-response-phenomenonTime

Test method:	TODO
---------------------	------

A.1.101. GetEOCoverageSet Response Trim Omitted

Test id:	/conf/eowcs/getEOCoverageSet-response-trim-omitted
Test purpose:	Requirement 101 /req/eowcs/getEOCoverageSet-response-trim-omitted
Test method:	TODO

A.1.102. GetEOCoverageSet Response Bound Omitted

Test id:	/conf/eowcs/getEOCoverageSet-response-bound-omitted
Test purpose:	Requirement 102 /req/eowcs/getEOCoverageSet-response-bound-omitted
Test method:	TODO

A.1.103. GetEOCoverageSet Response Count

Test id:	/conf/eowcs/getEOCoverageSet-response-count
Test purpose:	Requirement 103 /req/eowcs/getEOCoverageSet-response-count
Test method:	TODO

A.1.104. GetEOCoverageSet Response startIndex

Test id:	/conf/eowcs/getEOCoverageSet-response-startIndex
Test purpose:	Requirement 104 /req/eowcs/getEOCoverageSet-response-startIndex
Test method:	TODO

A.1.105. GetEOCoverageSet Response numberMatched attribute

Test id:	/conf/eowcs/getEOCoverageSet-response-numberMatched
Test purpose:	Requirement 105 /req/eowcs/getEOCoverageSet-response-numberMatched
Test method:	TODO

A.1.106. GetEOCoverageSet Response numberReturned attribute

Test id:	/conf/eowcs/getEOCoverageSet-response-numberReturned
Test purpose:	Requirement 106 /req/eowcs/getEOCoverageSet-response-numberReturned
Test method:	TODO

A.1.107. GetEOCoverageSet Response startIndex attribute

Test id:	/conf/eowcs/getEOCoverageSet-response-startIndex-attr
Test purpose:	Requirement 107 /req/eowcs/getEOCoverageSet-response-startIndex-attr
Test method:	TODO

A.1.108. GetEOCoverageSet Response next attribute

Test id:	/conf/eowcs/getEOCoverageSet-response-next
Test purpose:	Requirement 108 /req/eowcs/getEOCoverageSet-response-next
Test method:	TODO

A.1.109. GetEOCoverageSet Response previous attribute

Test id:	/conf/eowcs/getEOCoverageSet-response-previous
Test purpose:	Requirement 109 /req/eowcs/getEOCoverageSet-response-previous
Test method:	TODO

A.1.110. GetEOCoverageSet Response applySubset

Test id:	/conf/eowcs/getEOCoverageSet-response-applySubset
Test purpose:	Requirement 110 /req/eowcs/getEOCoverageSet-response-applySubset
Test method:	TODO

A.1.111. GetEOCoverageSet Response Scaling

Test id:	/conf/eowcs_geteocoverageset/getEOCoverageSet-scaling
Test purpose:	Requirement 111 /req/eowcs_geteocoverageset/getEOCoverageSet-scaling
Test method:	TODO

A.1.112. GetEOCoverageSet Response Interpolation

Test id:	/conf/eowcs_geteocoverageset/getEOCoverageSet-interpolation
Test purpose:	Requirement 112 /req/eowcs_geteocoverageset/getEOCoverageSet-interpolation
Test method:	TODO

A.1.113. GetEOCoverageSet Response CRSs

Test id:	/conf/eowcs_geteocoverageset/getEOCoverageSet-crss
Test purpose:	Requirement 113 /req/eowcs_geteocoverageset/getEOCoverageSet-crss
Test method:	TODO

A.1.114. Band Subsetting

Test id:	/conf/eowcs/band-subsetting
Test purpose:	Requirement 114 /req/eowcs/band-subsetting
Test method:	Determine the list of supported extensions via a valid <i>GetCapabilities</i> request; check that the extension required is listed.

A.1.115. Scaling

Test id:	/conf/eowcs/scaling
Test purpose:	Requirement 115 /req/eowcs/scaling
Test method:	Determine the list of supported extensions via a valid <i>GetCapabilities</i> request; check that the extension required is listed.

A.1.116. Interpolation

Test id:	/conf/eowcs/interpolation
Test purpose:	Requirement 116 /req/eowcs/interpolation
Test method:	Determine the list of supported extensions via a valid <i>GetCapabilities</i> request; check that the extension required is listed.

A.1.117. CRS

Test id:	/conf/eowcs/crs
Test purpose:	Requirement 117 /req/eowcs/crs
Test method:	Determine the list of supported extensions via a valid <i>GetCapabilities</i> request; check that the extension required is listed.

A.1.118. Encodings

Test id:	/conf/eowcs/encodings
Test purpose:	Requirement 118 /req/eowcs/encodings

Test method:	Determine the list of supported extensions via a valid <i>GetCapabilities</i> request; check that the extension required is listed.
---------------------	---

A.1.119. Protocol-bindings

Test id:	/conf/eowcs/protocol-bindings
Test purpose:	Requirement 119 /req/eowcs/protocol-bindings
Test method:	Determine the list of supported extensions via a valid <i>GetCapabilities</i> request; check that the extension required is listed.

A.2. Conformance Test Class: eowcs_get-kvp

The OGC URI identifier of this conformance class is: http://www.opengis.net/spec/WCS_application-profile_earth-observation/1.1/conf/eowcs_get-kvp

A.2.1. eowcs_get-kvp/Mandatory

Test id:	/conf/eowcs_get-kvp/mandatory
Test purpose:	Requirement 120 /req/eowcs_get-kvp/mandatory
Test method:	Determine the list of supported extensions via a valid <i>GetCapabilities</i> request; check that the extension required is listed.

A.2.2. eowcs_get-kvp/Conformance Class in Profile

Test id:	/conf/eowcs_get-kvp/conformance-class-in-profile
Test purpose:	Requirement 121 /req/eowcs_get-kvp/conformance-class-in-profile
Test method:	Determine the list of supported extensions via a valid <i>GetCapabilities</i> request; check that the extension required is listed.

A.2.3. eowcs_get-kvp/describeEOCoverageSet request

Test id:	/conf/eowcs_get-kvp/describeEOCoverageSet-request
Test purpose:	Requirement 122 /req/eowcs_get-kvp/describeEOCoverageSet-request
Test method:	Send a valid get-kvp <i>DescribeEOCoverageSet</i> request as defined. Check that the response is not an exception.

A.2.4. eowcs_get-kvp/describeEOCoverageSet eoid

Test id:	/conf/eowcs_get-kvp/describeEOCoverageSet-eoid
-----------------	--

Test purpose:	Requirement 123 /req/eowcs_get-kvp/describeEOCoverageSet-eoid
Test method:	Send a valid get-kvp <i>DescribeEOCoverageSet</i> request as defined. Check that the response is not an exception.

A.2.5. eowcs_get-kvp/describeEOCoverageSet containment

Test id:	/conf/eowcs_get-kvp/describeEOCoverageSet-containment
Test purpose:	Requirement 124 /req/eowcs_get-kvp/describeEOCoverageSet-containment
Test method:	Send a valid get-kvp <i>DescribeEOCoverageSet</i> request as defined. Check that the response is not an exception.

A.2.6. eowcs_get-kvp/describeEOCoverageSet count

Test id:	/conf/eowcs_get-kvp/describeEOCoverageSet-count
Test purpose:	Requirement 125 /req/eowcs_get-kvp/describeEOCoverageSet-count
Test method:	TODO

A.2.7. eowcs_get-kvp/describeEOCoverageSet startIndex

Test id:	/conf/eowcs_get-kvp/describeEOCoverageSet-startIndex
Test purpose:	Requirement 126 /req/eowcs_get-kvp/describeEOCoverageSet-startIndex
Test method:	TODO

A.2.8. eowcs_get-kvp/describeEOCoverageSet Subset

Test id:	/conf/eowcs_get-kvp/describeEOCoverageSet-subset
Test purpose:	Requirement 127 /req/eowcs_get-kvp/describeEOCoverageSet-subset
Test method:	Send a valid get-kvp <i>DescribeEOCoverageSet</i> request as defined. Check that the response is not an exception.

A.2.9. eowcs_get-kvp/getEOCoverageSet request

Test id:	/conf/eowcs_get-kvp/getEOCoverageSet-request
Test purpose:	Requirement 128 /req/eowcs_get-kvp/getEOCoverageSet-request
Test method:	Send a valid get-kvp <i>GetEOCoverageSet</i> request as defined. Check that the response is not an exception.

A.2.10. eowcs_get-kvp/getEOCoverageSet eoid

Test id:	/conf/eowcs_get-kvp/getEOCoverageSet-eoid
Test purpose:	Requirement 129 /req/eowcs_get-kvp/getEOCoverageSet-eoid
Test method:	Send a valid get-kvp <i>GetEOCoverageSet</i> request as defined. Check that the response is not an exception.

A.2.11. eowcs_get-kvp/getEOCoverageSet containment

Test id:	/conf/eowcs_get-kvp/getEOCoverageSet-containment
Test purpose:	Requirement 130 /req/eowcs_get-kvp/getEOCoverageSet-containment
Test method:	Send a valid get-kvp <i>GetEOCoverageSet</i> request as defined. Check that the response is not an exception.

A.2.12. eowcs_get-kvp/getEOCoverageSet count

Test id:	/conf/eowcs_get-kvp/getEOCoverageSet-count
Test purpose:	Requirement 131 /req/eowcs_get-kvp/getEOCoverageSet-count
Test method:	TODO

A.2.13. eowcs_get-kvp/getEOCoverageSet startIndex

Test id:	/conf/eowcs_get-kvp/getEOCoverageSet-startIndex
Test purpose:	Requirement 132 /req/eowcs_get-kvp/getEOCoverageSet-startIndex
Test method:	TODO

A.2.14. eowcs_get-kvp/getEOCoverageSet packageFormat

Test id:	/conf/eowcs_get-kvp/getEOCoverageSet-packageFormat
Test purpose:	Requirement 133 /req/eowcs_get-kvp/getEOCoverageSet-packageFormat
Test method:	TODO

A.2.15. eowcs_get-kvp/getEOCoverageSet mediaType

Test id:	/conf/eowcs_get-kvp/getEOCoverageSet-mediaType
Test purpose:	Requirement 134 /req/eowcs_get-kvp/getEOCoverageSet-mediaType
Test method:	TODO

A.2.16. eowcs_get-kvp/getEOCoverageSet format

Test id:	/conf/eowcs_get-kvp/getEOCoverageSet-format
Test purpose:	Requirement 135 /req/eowcs_get-kvp/getEOCoverageSet-format
Test method:	TODO

A.2.17. eowcs_get-kvp/getEOCoverageSet applySubset

Test id:	/conf/eowcs_get-kvp/getEOCoverageSet-applySubset
Test purpose:	Requirement 136 /req/eowcs_get-kvp/getEOCoverageSet-applySubset
Test method:	TODO

A.2.18. eowcs_get-kvp/getEOCoverageSet parameters

Test id:	/conf/eowcs_get-kvp/getEOCoverageSet-parameters
Test purpose:	Requirement 137 /req/eowcs_get-kvp/getEOCoverageSet-parameters
Test method:	TODO

A.2.19. eowcs_get-kvp/getEOCoverageSet Subset

Test id:	/conf/eowcs_get-kvp/getEOCoverageSet-subset
Test purpose:	Requirement 138 /req/eowcs_get-kvp/getEOCoverageSet-subset
Test method:	Send a valid get-kvp <i>GetEOCoverageSet</i> request as defined. Check that the response is not an exception.

A.3. Conformance Test Class: eowcs_soap

The OGC URI identifier of this conformance class is: http://www.opengis.net/spec/WCS_application-profile_earth-observation/1.1/conf/eowcs_soap

A.3.1. eowcs_soap/Mandatory

Test id:	/conf/eowcs_soap/mandatory
Test purpose:	Requirement 139 /req/eowcs_soap/mandatory
Test method:	Determine the list of supported extensions via a valid <i>GetCapabilities</i> request; check that the extension required is listed.

A.3.2. eowcs_soap/Conformance Class in Profile

Test id:	/conf/eowcs_soap/conformance-class-in-profile
Test purpose:	Requirement 140 /req/eowcs_soap/conformance-class-in-profile
Test method:	Determine the list of supported extensions via a valid <i>GetCapabilities</i> request; check that the extension required is listed.

A.3.3. eowcs_soap/describeEOCoverageSet Request Structure

Test id:	/conf/eowcs_soap/describeEOCoverageSet-request-structure
Test purpose:	Requirement 141 /req/eowcs_soap/describeEOCoverageSet-request-structure
Test method:	<p>Send otherwise valid soap <i>DescribeEOCoverageSet</i> requests containing:</p> <ul style="list-style-type: none">• exactly one Body element containing exactly one DescribeEOCoverageSet element;• exactly one Body element containing more than one DescribeEOCoverageSet element;• exactly one Body element containing no DescribeEOCoverageSet element;• more than one Body element;• without a Body element; <p>Pass test if appropriate valid results or exceptions, resp., are delivered.</p>

A.3.4. eowcs_soap/describeEOCoverageSet Response Structure

Test id:	/conf/eowcs_soap/describeEOCoverageSet-response-structure
Test purpose:	Requirement 142 /req/eowcs_soap/describeEOCoverageSet-response-structure
Test method:	Send a valid soap <i>DescribeEOCoverageSet</i> request to sever under test. Check response whether the condition is fulfilled.

A.3.5. eowcs_soap/describeEOCoverageSet-wsdl

Test id:	/conf/eowcs_soap/describeEOCoverageSet-wsdl
Test purpose:	Requirement 143 /req/eowcs_soap/describeEOCoverageSet-wsdl
Test method:	For the service under test, retrieve the WSDL description and issue requests which make use of this service definition. Check that the service can be addressed and that queries can be retrieved properly.

A.3.6. eowcs_soap/getEOCoverageSet Request Structure

Test id:	/conf/eowcs_soap/getEOCoverageSet-request-structure
Test purpose:	Requirement 144 /req/eowcs_soap/getEOCoverageSet-request-structure
Test method:	<p>Send otherwise valid soap <i>GetEOCoverageSet</i> requests containing:</p> <ul style="list-style-type: none">• exactly one Body element containing exactly one GetEOCoverageSet element;• exactly one Body element containing more than one GetEOCoverageSet element;• exactly one Body element containing no GetEOCoverageSet element;• more than one Body element;• without a Body element; <p>Pass test if appropriate valid results or exceptions, resp., are delivered.</p>

A.3.7. eowcs_soap/getEOCoverageSet Response Structure

Test id:	/conf/eowcs_soap/getEOCoverageSet-response-structure
Test purpose:	Requirement 145 /req/eowcs_soap/getEOCoverageSet-response-structure
Test method:	Send a valid soap <i>GetEOCoverageSet</i> request to sever under test. Check response whether the condition is fulfilled.

A.3.8. eowcs_soap/getEOCoverageSet-wsdl

Test id:	/conf/eowcs_soap/getEOCoverageSet-wsdl
Test purpose:	Requirement 146 /req/eowcs_soap/getEOCoverageSet-wsdl
Test method:	For the service under test, retrieve the WSDL description and issue requests which make use of this service definition. Check that the service can be addressed and that queries can be retrieved properly.

— end of ATS —

Annex B: Use Case Examples (Informative)

In the following two Use Cases are presented to illustrate possible application scenarios of EO-WCS in the domain of earth observation and remote sensing.

B.1. Use Case 1

Provider offers, through an EO-WCS service, one Dataset Series containing Sea Surface Temperature (SST) and another Dataset Series containing Ocean Color (OC).

User wants to compare the timely development and distribution of some algal bloom in relationship to ocean currents indicated by the changes in SST. User, therefore, plans to analyze a timeseries of OC and SST imageries over a certain period of time (TOI) in the Area of Interest (AOI).

User first addresses the EO-WCS service by issuing a *GetCapabilities* request. The resulting response contains information about available **DatasetSeriesIds**, their spatial extent (as **WGS84BoundingBox**), as well as their temporal validity (as **beginPosition** and **endPosition**).

Based on this information, User can issue a *DescribeEOCoverageSet* request, using the received **DatasetSeriesId** (as **eoId**) to obtain detail information on the content of the two offered DatasetSeries of interest. Since User is only interested in a limited period of time and a certain area, the *DescribeEOCoverageSet* request contains parameters for spatial and temporal subsetting, for example:

```
subset=lat(32,47)&  
subset=long(11,33)&  
subset=phenomenonTime("2006-08-01","2006-08-22T19:22:00Z")
```

User will receive a response containing the **CoverageIds** of the datasets available within this spatio-temporal bounding box provided; notably, this set will be empty if no item is contained within the area and time queried.

User subsequently decides about which of the coverages identified are of interest and issues a *GetCoverage* request for each **CoverageId** received in the *DescribeEOCoverageSet* response. Again, User can select an AOI (via the subset parameter); additionally, specific bands (via range subsetting), output coverage format, output CRS, interpolation method, etc. can be selected depending on the WCS extensions implemented by the server; the Capabilities document contains pertinent information. Following download via *GetCoverage*, the SST and OC coverages can be analyzed and processed on User's local workstation.

B.2. Use Case 2

Provider offers, during harvesting seasons (e.g., March through August), three 2-monthly Stitched Mosaics for a certain area. Whenever new images are available in this area they are included in the respective (time-slot) Stitched Mosaic, possibly replacing older datasets or parts thereof. The providers applies a "least cloud cover/newest on top" approach to feed into the respective mosaics. At the end of each 2-month period the next mosaic is initiated. Stitched Mosaics enable Provider to

offer the full metadata set for each dataset participating in a mosaic for any time instance, down to pixel-level accuracy.

User wants to assess crop yield for an AOI contained within the providers Stitched Mosaics. For doing so, User needs data about the same AOI for at least 2 points in time. Further, User requires the full metadata recorded (including possible lineage data) together with the actual imagery.

User addresses the EO-WCS by issuing a *GetCapabilities* request. The response contains the **coverageIds** for all Stitched Mosaics available.

Further information - i.e., metadata - can be obtained through a *DescribeCoverage* request on the **coverageIds** received. This yields bounding box, footprint, bands, as well as timestamp information (e.g., oldest and youngest image) of the datasets participating in the Stitched Mosaic. Alternatively, if User needs details about those datasets comprising a particular Stitched Mosaic, a *DescribeEOCoverageSet* request using the **CoverageId** as **eoId** can be issued. This results in detailed information (time, footprint, bands, etc.) about each dataset participating in the object queried.

For accessing the image data, User issues a *GetCoverage* request providing the identifier of the object to be retrieved. In addition to the mandatory request parameters, further optional parameters allow specifying output format, geographic subset, and further details; availability of this functionality depends on the extensions the EO-WCS implements, as indicated in its Capabilities document. The coverages retrieved finally can be analyzed and processed further in User's local workstation environment.

Annex C: Revision History

Date	Release	Editor	Primary clauses modified	Description
2010-10-27	0.1.0	Peter Baumann, Stephan Meissl	All	Created
2011-01-19	0.2.0	Peter Baumann, Stephan Meissl	All	Various updates
2011-01-19	0.3.0	Jinsongdi Yu	Annex A	Added ATS
2011-06-10	0.4.0	Peter Baumann, Stephan Meissl	All	Incorporated OAB comments
2013-06-19	0.5.2	Peter Baumann, Stephan Meissl	All	Thorough review and adjustments to WCS and GMLCOV corrigenda
2014-03-05	1.0	Peter Baumann, Stephan Meissl, Jinsongdi Yu	Clause 9.2.2, Footer	Corrected example and copyright year in
2016-05-10	1.0	Stephan Meissl	None	Made an AsciiDoc copy and published it on GitHub (https://github.com/EOX-A/eo-wcs , https://eox-a.github.io/eo-wcs)
TBD	TBD	Stephan Meissl	TBD	Proposal from ESA project EVO-ODAS
